

### V850/SV1™

### 32-/16-BIT SINGLE-CHIP MICROCONTROLLERS

#### DESCRIPTION

- ★ The  $\mu$ PD703039, 703039Y, 703040, 703040Y, 703041, and 703041Y (collectively known as the V850/SV1) are products in the low-power series of V850 Family™ products, which are NEC's single-chip microcontrollers for real-time control.

The V850/SV1 employs the CPU core of the V850 Family, and has on-chip peripheral functions such as large capacity ROM/RAM, a multi-function timer/counter, serial interface, A/D converter, DMA controller, PWM, and a Vsync/Hsync separation circuit.

The V850/SV1 not only realizes the low power consumption necessary for applications such as camcorders, but also extremely high cost performance.

Detailed function descriptions are provided in the following user's manuals. Be sure to read them before designing.

V850/SV1 User's Manual Hardware : U14462E  
 V850 Family User's Manual Architecture : U10243E

#### FEATURES

- Number of instructions: 74
- 10-bit resolution A/D converter: 16 channels
- Timer/counter
- ★ ○ Minimum instruction execution time:
  - 62.5 ns (@ 16 MHz operation with main system clock) 24-bit: 2 channels, 16-bit: 2 channels
  - 30.5  $\mu$ s (@ 32.768 kHz operation with subsystem clock) 8-bit: 8 channels
- Watch timer: 1 channel
- General-purpose registers: 32 bits  $\times$  32 registers
- Watchdog timer: 1 channel
- Instruction set (signed multiplication, saturation operations, 32-bit shift instructions, bit manipulation instructions, load/store instructions)
- DMA controller: 6 channels
- Interrupts and exceptions
  - Non-maskable interrupt: 2 sources
  - Maskable interrupt
    - :  $\mu$ PD703039, 703040, 703041 (51 sources)
    - :  $\mu$ PD703039Y, 703040Y, 703041Y (52 sources)
  - Software exception: 32 sources
  - Exception trap: 1 source
- Serial interface (SIO)
  - Asynchronous serial interface (UART)
  - Clocked serial interface (CSI)
  - 3-wire variable length serial interface (CSI4)
  - I<sup>2</sup>C bus interface (I<sup>2</sup>C) ( $\mu$ PD703039Y, 703040Y, 703041Y)
- ★ ○ Internal memory:
  - $\mu$ PD703039, 703039Y (ROM: 256 KB, RAM: 8 KB)
  - $\mu$ PD703040, 703040Y (ROM: 256 KB, RAM: 16 KB)
  - $\mu$ PD703041, 703041Y (ROM: 192 KB, RAM: 8 KB)
- I/O lines Total: 151
- RTP: 8 bits  $\times$  2 channels or 4 bits  $\times$  4 channels

The information contained in this document is being issued in advance of the production cycle for the device. The parameters for the device may change before final production or NEC Corporation, at its own discretion, may withdraw the device prior to its production.  
 Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

- PWM output: 4 channels
- Vsync/Hsync separation circuit
- On-chip key return function
- On-chip clock generator
- Power saving function: HALT/IDLE/STOP modes
- ROM correction: 4 points changeable
- Package: 176-pin plastic LQFP (24 × 24 mm)

**APPLICATIONS**

- System/servo/camera control of camcorders
- Portable cameras such as digital still cameras
- Cellular phones, portable information terminals, etc.

**2.** Ports 4, 5, 6, 9, CLKOUT,  $\overline{\text{WAIT}}$  (includes alternate function pins)

3. Ports 7, 8 (includes alternate function pins)
4. Be sure not to exceed each absolute maximum rating (MAX.).

**Cautions** 1. Do not directly connect to each other output pins (or I/O pins) of IC products, and do not connect them directly to V<sub>DD</sub>, V<sub>CC</sub>, or GND. However, open-drain pins and open-connector pins can be directly connected to each other. Moreover, external circuits that implement a timing that avoids conflict with the output of pins that go into high-impedance can be directly connected.

2. Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

The ratings and conditions indicated for DC characteristics and AC characteristics represent the quality assurance range during normal operation.

- Notes**
- The first clock pulse in the start condition is generated after the hold time.
  - The system must internally provide at least 300 ns hold time for the SDAn signal (at V<sub>IHmin.</sub> of the SCLn signal) in order to fill the undefined area that appears at the SCLn falling edge.
  - If the system does not extend the low hold time (t<sub>LOW</sub>), it is required to satisfy only the maximum data hold time (t<sub>HD: DAT</sub>).
  - The high-speed I<sup>2</sup>C bus is available in the standard mode I<sup>2</sup>C bus system. In this case, following conditions should be satisfied.
    - When the system does not extend the low-state hold time of the SCLn signal  
t<sub>SU: DAT</sub> ≥ 250 ns
    - When the system extends the low-state hold time of the SCLn signal  
Before the SCLn line is released (t<sub>Rmax.</sub> + t<sub>SU: DAT</sub> = 1000 + 250 = 1250 ns: Standard mode I<sup>2</sup>C bus specification), send the next data bit to the SDAn line.
  - Cb: Total capacitance of one bus line (Unit: pF)

★4. RECOMMENDED SOLDERING CONDITIONS

The μPD703039, 703039Y, 703040, 703040Y, 703041, and 703041Y should be soldered and mounted under the following recommended conditions.

For the details of the recommended soldering conditions, refer to the document **Semiconductor Device Mounting Technology Manual (C10535E)**.

For soldering methods and conditions other than those recommended below, contact your NEC sales representative.

**Table 4-1. Surface Mounting Type Soldering Conditions**

μPD703039GM-xxx-UEU: 176-pin plastic LQFP (fine pitch) (24 × 24 mm)

μPD703040GM-xxx-UEU: 176-pin plastic LQFP (fine pitch) (24 × 24 mm)

## NOTES FOR CMOS DEVICES

## ① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

## ② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

## ③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

Purchase of NEC I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

## Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

- **The information contained in this document is being issued in advance of the production cycle for the device. The parameters for the device may change before final production or NEC Corporation, at its own discretion, may withdraw the device prior to its production.**
  - No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
  - NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
  - Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
  - While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
  - NEC devices are classified into the following three quality grades:  
"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.
    - Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
    - Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
    - Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.
- The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.
