

**DUAL 2-A SOURCE DRIVER**

- OUTPUT CURRENT UP TO 2.5 A
- WIDE RANGE OF SUPPLY VOLTAGE : + 8 V TO + 26 V
- CAN WITHSTAND OVERVOLTAGES OF AS HIGH AS 60 V BETWEEN V<sub>CC</sub> AND GROUND
- OUTPUT VOLTAGE CAN SWING TO LOWER THAN GROUND
- "SENSE" AND "ALARM" OUTPUTS ARE OPEN COLLECTOR OUTPUTS

**DESCRIPTION**

The TDF1779A is a dual source driver delivering high output currents and the capability to drive highly inductive loads (Electrovalves, contractors, relays...).

This device is essentially blow-out proof, each output is protected against short-circuits. If internal dissipation becomes too high, drivers will shut down to prevent excessive heating. An "ALARM" output is provided to indicate the action of the thermal protection. To reactivate the power outputs, the reset input must be forced to low state.

"SENSE" information of both power outputs are ORed together and then processed internally.

A "STROBE" input is also provided to offer the possibility of disabling the power outputs.

## TYPICAL APPLICATION WITH TDF1779A TWO LOADS 12 V - 2 A

### MAIN FEATURES

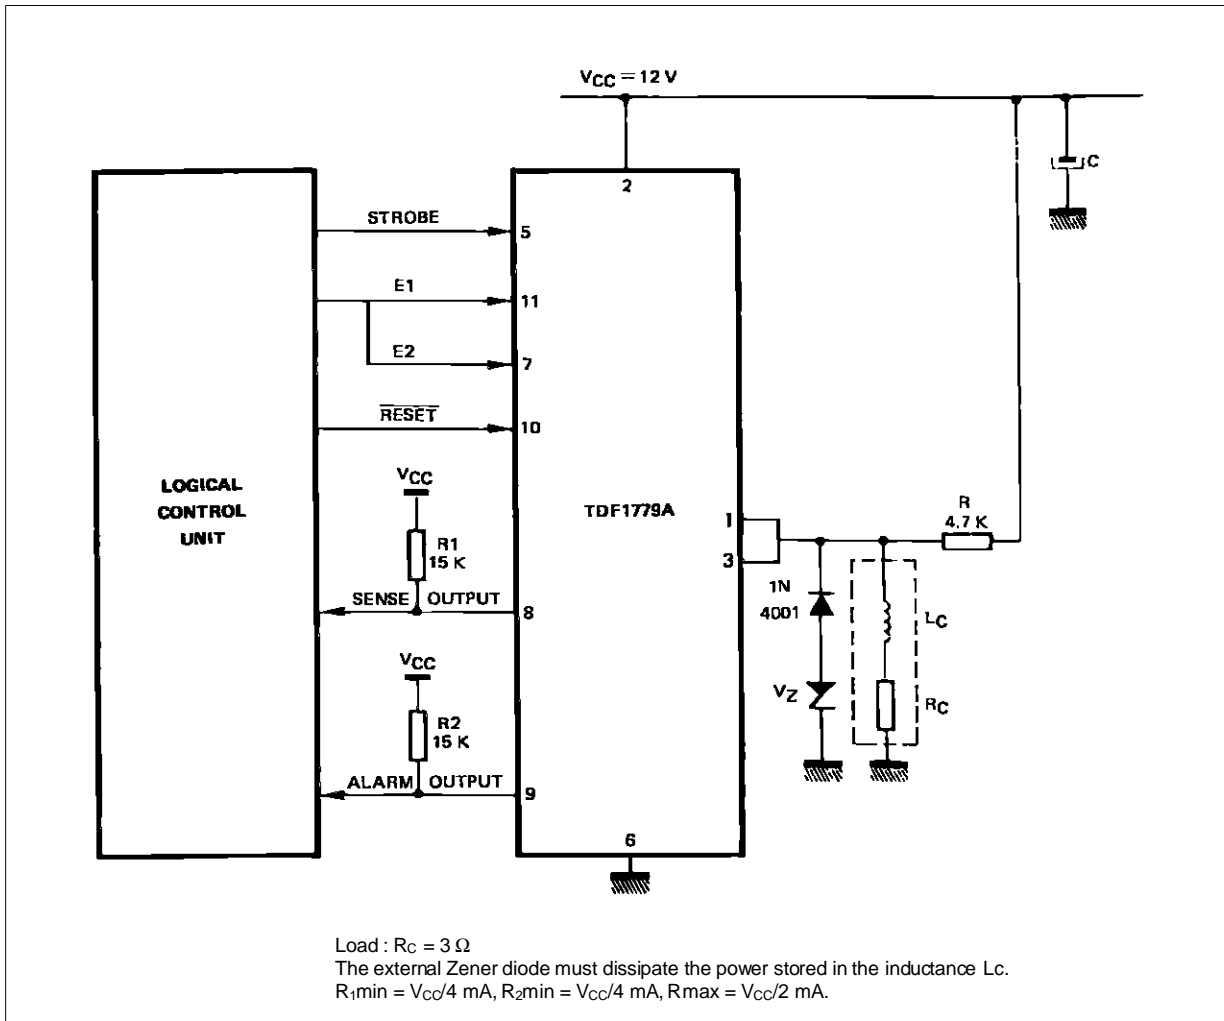

This application is protected against for short circuit and overload.

The load disconnection is detected when inputs  $E_1$  and  $E_2$  are low and the sense output is high.

When thermal protection is activated the pin 9 is low. Inputs are TTL compatible.

Sense output, Alarm output are open collector.

TDF1779A HIGH CURRENT APPLICATION WITH LOAD 12 V - 4 A

MAIN FEATURES

This application has the same features as the dual 2 A - 12 V application.
