

2609C Broadband Photodiode Module

Features

- 1 GHz flat response, ± 0.5 dB
- High responsivity:
 - >0.85 A/W at 1310 nm
 - 0.95 A/W at 1550 nm
- Internal current gain, 6 dB (typ.)
- 75Ω impedance-matched

Applications

- Extended bandwidth, broadband CATV receivers

Description

The 2609C is a packaged impedance-matched photodiode module with internal gain designed for use in optical broadband receivers in fiber-optic networks. The patented impedance-match technology results in improved gain-bandwidth product compared to external circuits due to control of parasitics between the photodiode and the impedance-matching circuit.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
