

TENTATIVE

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

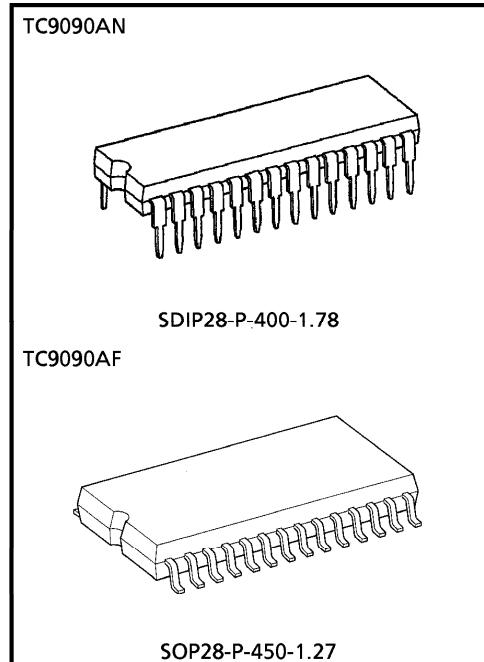

TC9090AN, TC9090AF

MULTICOLOR SYSTEM VERSION 3-LINE DIGITAL Y / C SEPARATION IC

The TC9090AN and TC9090AF separate luminance (Y) and chrominance (C) signals from a multicolor system composite video signal. It employs the Toshiba logical comb filter to realize high performance Y/C separation at low cost.

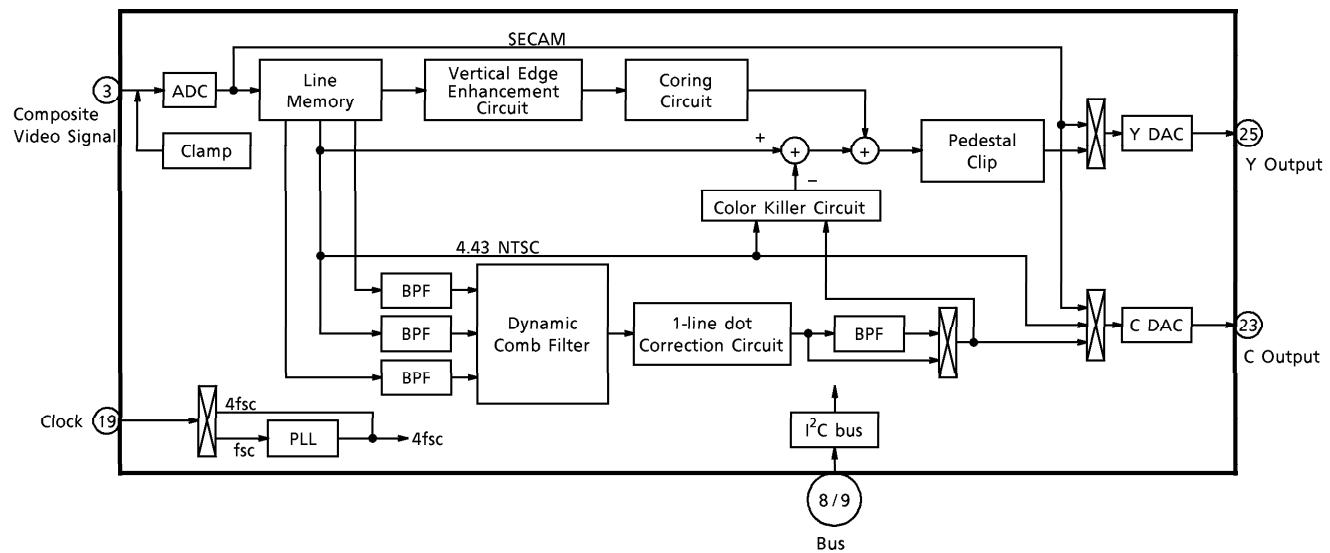

FEATURES

- TV systems : NTSC, PAL, N-PAL, M-PAL, 4.43NTSC
- PLL 4× multiplication circuit
- Sync tip clamping circuit
- Internal 8bit A/D converter
- Internal 8bit D/A converters (2ch)
- 4H line memories
- Dynamic comb filter
- 1-line dot interference correction circuit
- Vertical edge enhancement circuit
- Color killer mode (Y/C separation OFF)
- Chroma output band width selectable
- I²C bus control
- SDIP28/SOP28 package
- 5V single power supply

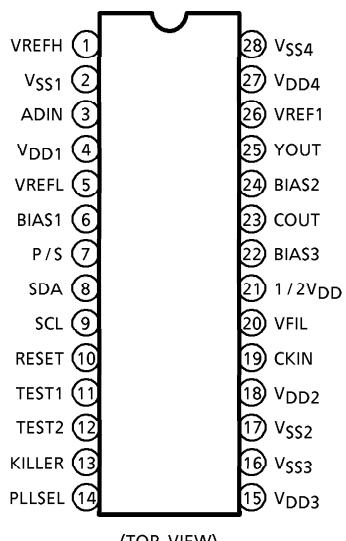

Weight
SDIP28-P-400-1.78 : 1.7g (Typ.)
SOP28-P-450-1.27 : 0.8g (Typ.)

		Pin TV system select.	I	
12	TEST2 (VENH1)	I ² C bus Test terminal. Normally connected to digital ground.	—	
		Pin Vertical edge enhancement level select.	I	
13	KILLER	Color killer mode select. L : Color H : Black and white	I	
14	PLLSEL	PLL circuit select. (Switches input clock frequency.) L : PLL ON, fsc input H : PLL OFF, 4fsc input	I	
15	VDD3	Power supply for digital components (+ 5V).	—	—
16	VSS3	Ground for digital components.	—	—
17	VSS2	PLL ground.	—	—
18	VDD2	PLL power supply (+ 5V).	—	—
19	CKIN	Clock input. After applying a capacitor for DC cut, input a color-burst-synchronized fsc/4fsc clock signal to this pin.	I	
20	VFIL	Connect a VCO filter to this pin.	—	

PIN No.	PIN NAME	FUNCTION	I/O	INTERFACE CIRCUIT
21	1/2VDD	Bias for line memory. This pin requires 2.5V external bias.	I	
22	BIAS3	Bias for DAC. This defaults internally to 3.5V, so this pin should normally be connected to ground through a 0.01μF capacitor.	—	
23	COUT	Chrominance signal output.	O	
24	BIAS2	Bias for DAC. This defaults internally to 1.6V, so this pin should normally be connected to ground through a 0.01μF capacitor.	I	
25	YOUT	Luminance signal output.	O	
26	VREF1	DAC bias lower-limit reference voltage for. This pin requires 3.0V external bias.	—	
27	VDD4	DAC power supply (+5V).	—	—
28	VSS4	DAC ground.	—	—

FUNCTION BLOCK DESCRIPTIONS

1. Input clamp (CLAMP)

This block performs sync tip clamping of the composite video signal. It provides a feedback signal for clamping A/D-converted minimum data at Y/C separation to the internal DC bias level.

2. A/D converter (ADC)

This block comprises a high-speed series-parallel 8-bit A/D converter that accepts an input video signal of 1.5V_{p-p} (from sync level to 100% white level).

3. Line memory

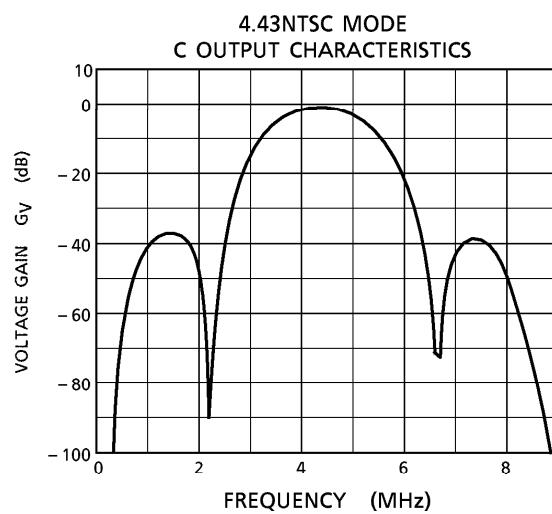

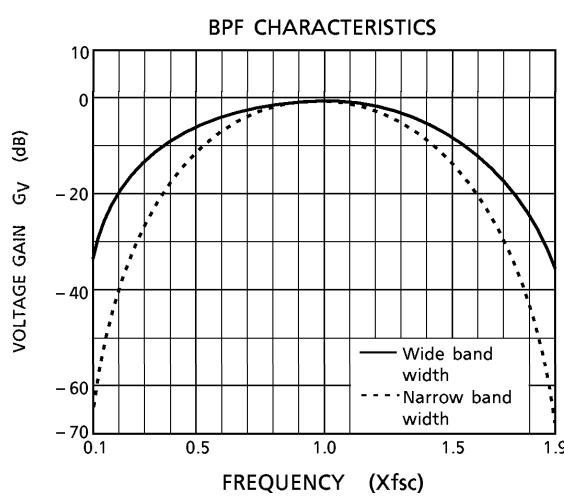

This block consists of DRAM resident line memory for 1H delay. There are four pairs. The line memories are combined to produce a 3-line composite video signal for each TV system type.

1H delay of the line memory

TV SYSTEM	3.58NTSC	PAL	N-PAL	M-PAL	4.43NTSC
Delay (clock)	910	1,135	917	909	—

4. Band-pass filter (BPF)

In this block, with fsc as the center frequency of the BPF, the chrominance signal is extracted from the line-memory-delayed composite video signal. The same logic is used for NTSC, PAL, M-PAL and N-PAL input signals, but the characteristics differ since each TV system uses a different fsc and system clock. Since the BPF for the chrominance signal output can be controlled (ON or OFF), the chrominance output can therefore be switched between a narrow band width and a wide band width. This can be controlled by the I²C bus only in I²C bus control mode. In pin control mode, the chrominance output is set to a fixed wide band width. Separate BPF logic is used for the 4.43NTSC system type.

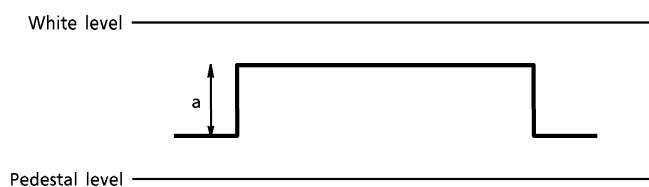

5. Dynamic comb filter (DCF)

This block comprises a band-pass filter that extracts the vertical component of the chrominance signal. Using Toshiba original logic, a correlation of the three lines is sought for. The absence of correlation is taken as an indication of a luminance signal, at which time chrominance signal output is suppressed.

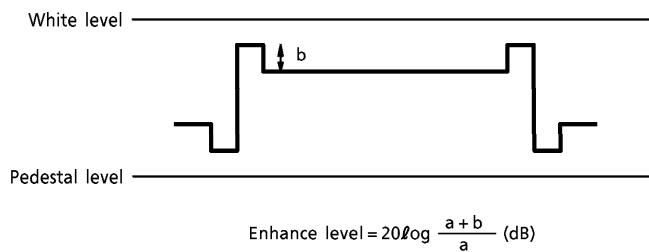

6. Vertical edge enhancement circuit (VENH)

This block enhances the uncorrelated components among the three lines of the luminance signal following coring. The luminance signal, obtained by subtracting the chrominance signal from the composite video signal, is added to the vertical edge enhancement component and output through the D/A converter. However, this output signal is limited to the pedestal level (fixed internally) by the pedestal clipping circuit (except for the sync tip level). Eight levels of enhancement (0dB to 1.94dB) can be selected by I²C bus control and four levels of enhancement (0dB to 1.49dB) can be selected by pin control. This block can be used with any of the TV system types except SECAM.

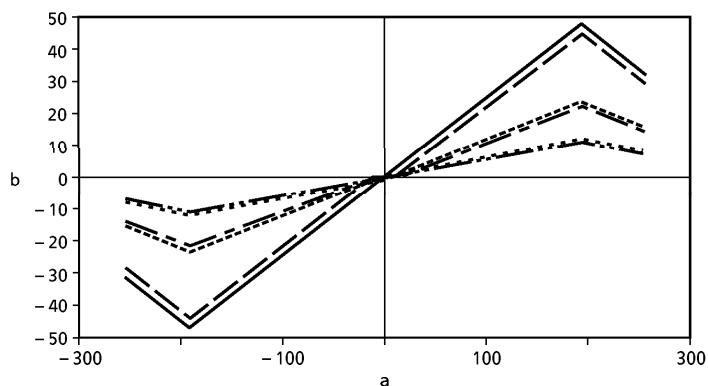

(i) Input signal with edge component

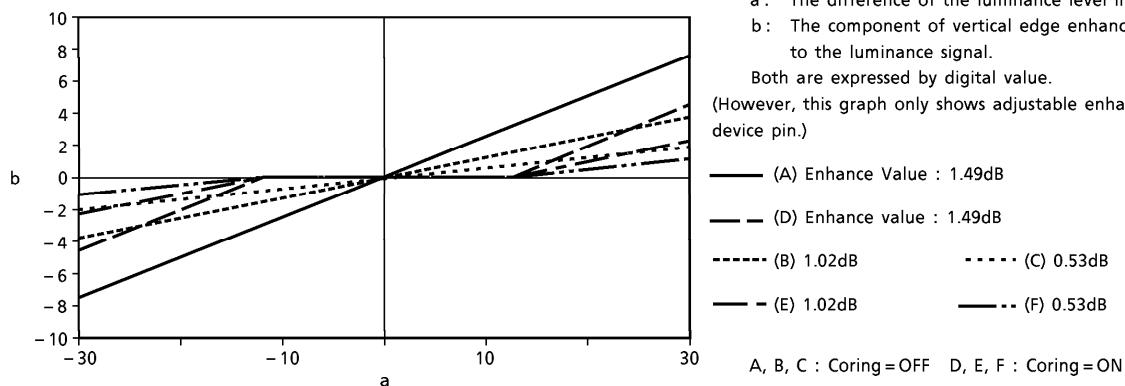

(ii) Output signal

Vertical edge enhancement characteristic

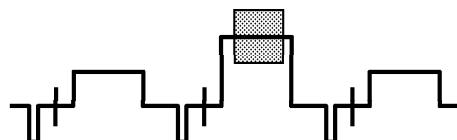

Vertical edge enhancement characteristic (Zoom)

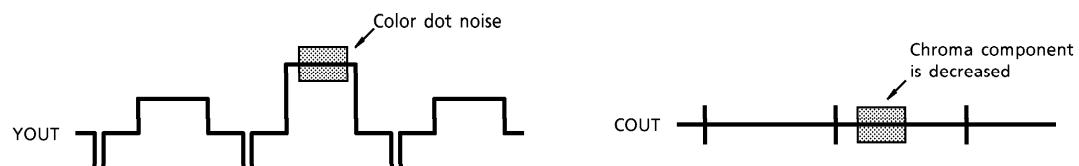

7. 1-line dot interference correction

Previously, a 1-line-only chrominance signal was processed as a luminance signal resulting in dot crawl. This circuit prevents this problem by extracting the 1-line dot component and adding it to the DCF output. This function is used with the NTSC system only, and can be set ON or OFF under I²C bus control. Under pin control, it is always ON.

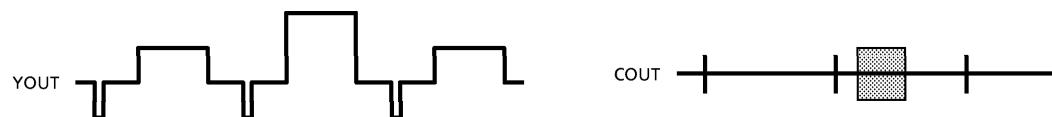

(i) Input signal

(ii) 1-line circuit output : OFF

(iii) 1-line circuit output : ON

8. PLL (4x clock signal multiplier)

This block supplies a 4fsc (PLL 4x multiplied) signal for use as system clock. An fsc or 4fsc input clock is selectable under I²C bus control. Under pin control, the external clock signal is used, bypassing the PLL circuit.

9. Clock and memory timing generator (RTIM)

This block supplies a buffered system clock signal to the other circuit blocks, and also generates a timing signal for the memory blocks.

10. D/A converter (DAC)

This block comprises a high-speed 8bit D/A converter. It provides Y output at approximately 2.0V_{p-p} and burst-level C output at approximately 572mV_{p-p}.

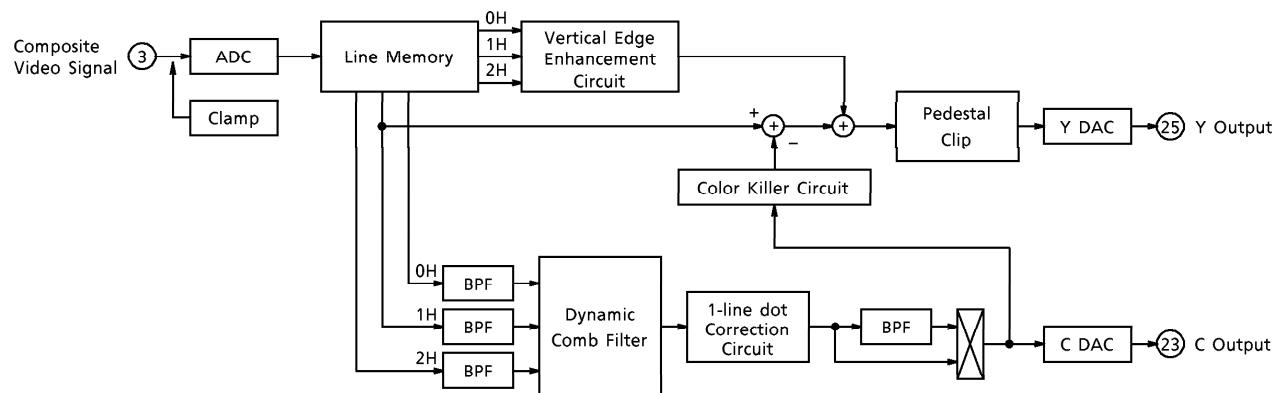

SIGNAL FLOW

● Signal processing

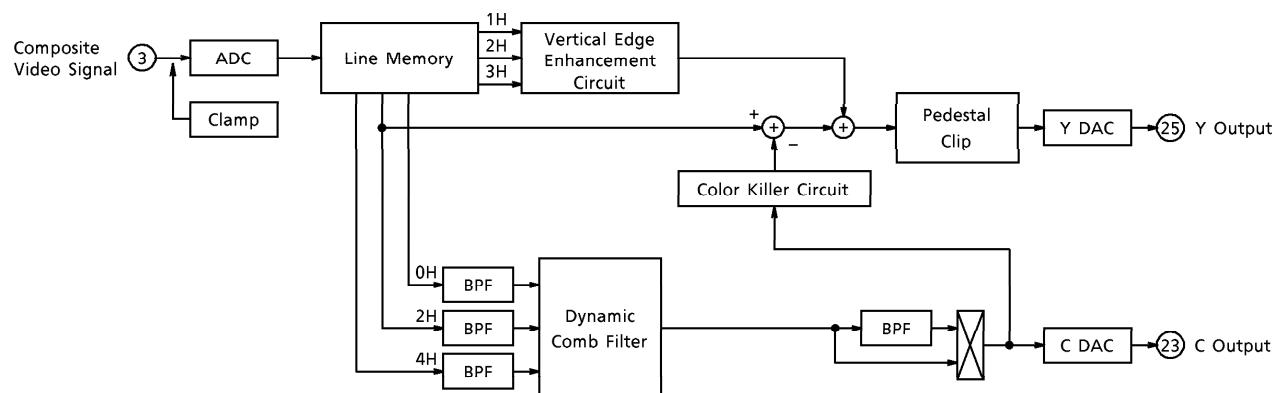

TV SYSTEM	METHOD OF Y/C SEPARATION	VENH CIRCUIT	1-LINE DOT CORRECTION CIRCUIT
NTSC	3-line (0H, 1H, 2H)	○ ($\pm 1H$)	○
PAL	3-line (0H, 2H, 4H)	○ ($\pm 1H$)	—
N-PAL	3-line (0H, 2H, 4H)	○ ($\pm 1H$)	—
M-PAL	3-line (0H, 2H, 4H)	○ ($\pm 1H$)	—
4.43NTSC	Chroma BPF	○ ($\pm 1H$)	—
SECAM	Bypass (Input→ADC→DAC→Output)	—	—

● Signal flow chart

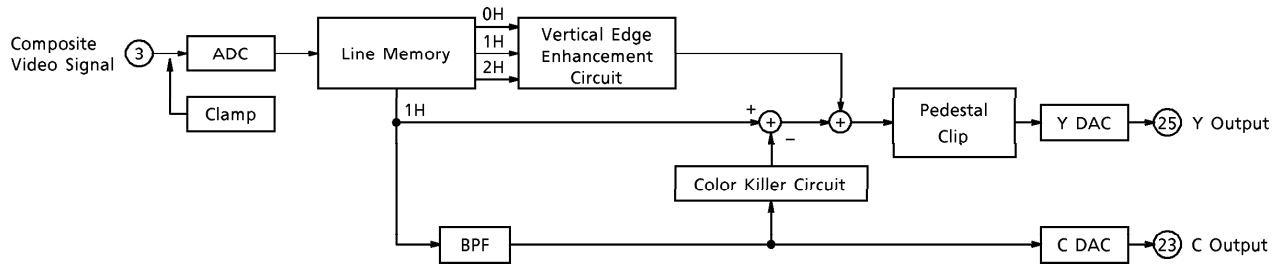

1. NTSC system

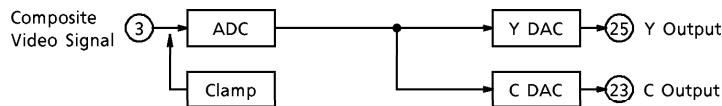

2. PAL, N-PAL, M-PAL systems

3. 4.43NTSC system

4. SECAM

FUNCTION CONTROL

There are two ways to control TC9090AN and TC9090AF functions : through the I²C bus or through the device pins. The method used is selected with function control selector switch P/S (pin 7).

- Function table

FUNCTION	SYMBOL	CONTROL		MODE
		I ² C	PIN	
TV System Selector	TVSW	<input type="radio"/>	<input type="radio"/>	NTSC, PAL, N-PAL, M-PAL 4.43NTSC, SECAM
VENH Level Selector	VENH	<input type="radio"/>	<input type="radio"/>	I ² C bus control : 8 steps (0dB~1.94dB) Pin control : 4 steps (0dB~1.49dB)
Color Killer Switch	KILLER	<input type="radio"/>	<input type="radio"/>	Color, B/W
Coring Switch	CORING	<input type="radio"/>	ON	Coring circuit on, off
1-Line Dot Correction Switch	1LINE	<input type="radio"/>	ON	1-line dot correction circuit on, off
Chroma Band-Width Selector	CBPF	<input type="radio"/>	Wide	Wide band width, narrow band width
PLL Selector	PLLSEL	<input type="radio"/>	<input type="radio"/>	fsc input, 4fsc input (PLL off)

For KILLER and PLLSEL, pin control is also possible even in I²C bus control. When you set to "1" or "H" in either control, however, these settings have priority.

Example :

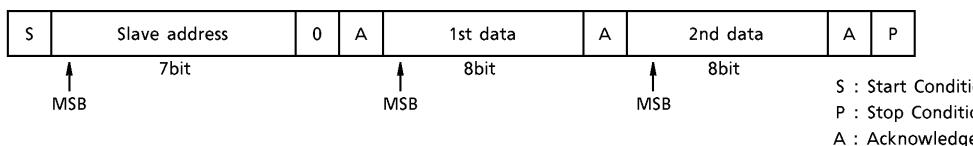

I²C bus : 1 Pin : L → I²C bus : 1 has priority.

I²C bus : 0 Pin : H → Pin : H has priority.

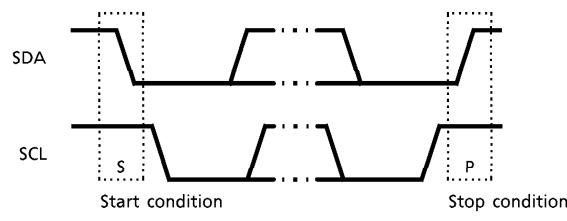

I²C BUS CONTROLLED FORMAT SUMMARY

Bus controlled format of TC9090AN and TC9090AF are based on I²C bus control format of Philips.

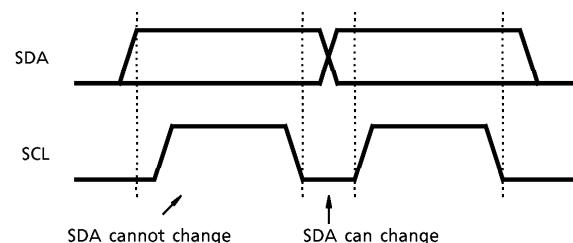

Data transfer format

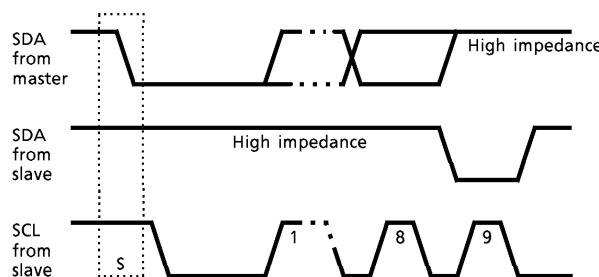

(1) Start and stop condition

(2) Bit transfer

(3) Acknowledge

(4) Slave address

A6	A5	A4	A3	A2	A1	A0	R / \overline{W}
1	0	1	1	0	0	1	0

Purchase of TOSHIBA I²C components conveys a license under the Philips I²C Patent Rights to use these components in an I²C system, provided that the system conforms to the I²C Standard Specification as defined by Philips.

I²C BUS CONTROL DATA REGISTERS

Value in tables are default initialization values.

RESTRICTIONS ON PRODUCT USE

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
