LA7823

Monolithic Linear IC

Color CRT Display Synchronization,
Deflection Circuit

The LA7823 is an IC that contains a generator of horizontal, vertical blanking pulses as well as the main functions required to provide synchronization and deflection in color CRT displays and also accepts TTL input. It is a multifunctional IC aiming at high-quality picture reproduction.

Functions

- . Sync separation
- . Vertical oscillation
- . Vertical drive
- . Horizontal AFC
- . Horizontal oscillation
- . X-ray protection
- . Composite blanking pulse (vertical + horizontal blanking pulse)
- . Vertical blanking pulse (Vertical blanking pulse only can be taken out.)

Features

- . Horizontal and vertical oscillations are stable against variations in ambient temperature and supply voltage due to small warm-up drift.
- . Small variation in horizontal oscillation frequency.
- . Good linearity and interlace because DC bias at vertical output stage is subjected to sampling control within retrace time.
- . Any vertical blanking pulse width can be set by peripheral parts.
- . The AFC defeat function is eliminated during vertical trigger period to use the LA7823 as horizontal/vertical sync separate input type only.
- . Multifunctional and small-sized (DIP-16)

Maximum Ratings at Ta=25°C
