

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

**TC74LVX74F, TC74LVX74FN, TC74LVX74FT****DUAL D-TYPE FLIP FLOP WITH PRESET AND CLEAR**

The TC74LVX74 is a high speed CMOS D-FLIP FLOP fabricated with silicon gate C<sup>2</sup>MOS technology. Designed for use in 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation. This device is suitable for low voltage and battery operated systems.

The signal level applied to the D INPUT is transferred to Q OUTPUT during the positive going transition of the CK pulse.

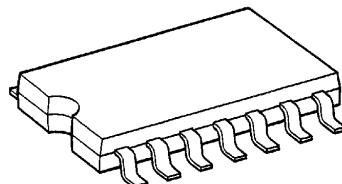

CLR and PR are independent of the CK and are accomplished by setting the appropriate input low. An input protection circuit ensures that 0 to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

**FEATURES**

- High speed :  $f_{MAX} = 145\text{MHz}$  (Typ.) ( $V_{CC} = 3.3\text{V}$ )
- Low power dissipation :  $I_{CC} = 2\mu\text{A}$  (Max.) ( $T_a = 25^\circ\text{C}$ )
- Input voltage level :  $V_{IL} = 0.8\text{V}$  (Max.) ( $V_{CC} = 3\text{V}$ )  
 $V_{IH} = 2.0\text{V}$  (Min.) ( $V_{CC} = 3\text{V}$ )
- Power down protection is provided on all inputs.
- Balanced propagation delays :  $t_{PLH} \approx t_{PHL}$
- Pin and function compatible with 74HC74

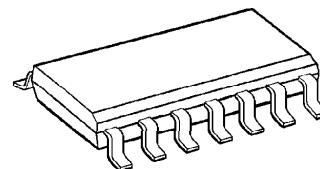

(Note) The JEDEC SOP (FN) is not available in Japan.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
