

## Proximity Switch

TCA 205

### Features

- Large supply voltage range
- High output current
- Antivalent outputs
- Adjustable switching distance
- Adjustable hysteresis
- Turn-on delay

Bipolar IC

Type	Ordering Code	Package
■ TCA 205 A	Q67000-A1034	P-DIP-14

■ Not for new design.

This IC is intended for applications in inductive proximity switches. The outputs switch when the oscillation is damped, e.g. by the approach of a metal object.

The resistance of distance and hysteresis  $R_{Di}$  and  $R_{Hy}$ , for proximity switch TCA 205 A; may be applied as follows:

**1. Series hysteresis**

**2. Parallel hysteresis**

Circuit 1 is more suitable for proximity switches with oscillator frequencies of  $f > 200$  kHz to 300 kHz, and small distances. Circuit 2 is more favorable for AF proximity switches having larger distances. This is due to the lower  $R_{Hy}$  values enabled by circuit 1 (min. 0  $\Omega$ ) compared with 2 circuit 2 (min. 6 k $\Omega$ ). Starting at frequencies of 200 kHz, high  $R_{Hy}$  values effect in addition to the hysteresis also the oscillator phase. Practical applications, however, require little phase response to receive a clear evaluation.
