

TA8003S

5 V LOW DROPOUT VOLTAGE REGULATOR WITH ON / OFF SWITCH

The TA8003S is a 5 V power IC with an ON/OFF output control pin. The TA8003S is also designed to provide a maximum output current of 400 mA.

In addition to low input-output voltage and standby current, this device has the following protective functions :

FEATURES

- Low standby current : 800 μ A (typ.)
- Maximum output current : 400 mA (max.)
- Low input-output dropout voltage: 0.6 V (max.)
- Multi-protection : power supply reverse connection / overvoltage protection / overheat protection / short-circuit protection / 60 V load dump
- Adjustable output voltage
- Controllable output ON / OFF
- TO-220 5-pin isolation package

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

PIN DESCRIPTION

PIN No.	SYMBOL	DESCRIPTION
1	ADJ	Output voltage adjusting terminal. Connect a resistor between ADJ and OUT to increase the output voltage. $V_{OUT} = V_{ref} \left\{ 1 + \frac{R_2 (R_1 + R_{adj})}{R_1 \cdot R_{adj}} \right\}$ $R_1 = 28.5 \text{ k}\Omega, R_2 = 100 \text{ k}\Omega, V_{ref} = 1.1 \text{ V}, R_{adj} : \text{Adjustment resistance}$
2	DIS	Output ON/OFF control terminal. Output is ON when the pin is open or at the "L" level, and OFF when the pin is at the "H" level.
3	GND	Ground terminal
4	IN	Power supply terminal
5	OUT	The 5 V output terminal with maximum output current 400 mA

TEST CIRCUIT

1. V_{OUT} , Reg-Line, Reg-Load, I_B , V_{DROP} , V_{IN} , I_{SC}

2. $V_{DIS} (ON)$, $I_{DIS} (ON)$, $V_{DIS} (OFF)$, $I_{DIS} (OFF)$

APPLICATION CIRCUIT

* The equivalent series resistance (ESR) of C_{OUT} must be less than 1Ω in operating temperature range.

Note on use :

1. Connect the input and output capacitors close to the pins of the regulator. If the output voltage oscillates, increase the C_{OUT} capacity and decrease the ESR. Make sure that the output voltage does not oscillate over the full range of the operating temperature.
2. When the output voltage exceeds the variable range, malfunction may arise.
