TC74HC126AP/AF QUAD BUS BUFFER

(Note) The JEDEC SOP (FN) is not available in Japan.

The TC74HC125A/126A are high speed CMOS QUAD BUS BUFFERs fabricated with silicon gate C^2MOS technology.
They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.
The TC74HC125A requires the 3-state control input $\overline{G}$ to be set high to place the output into the high impedance state, whereas the TC74HC126A requires the control input to be set low to place the output into high impedance.
All inputs are equipped with protection circuits against static discharge or transient excess voltage.
