LC86E6232

CMOS LSI

8-Bit Single Chip Microcomputer**Preliminary****Overview**

The LC86E6232 microcomputer is CMOS 8-bit single chip microcomputer with UVEPROM for LC866200A series.

This microcomputer has the function and the pin discription of LC866200A series mask ROM version, and 32K-byte EPROM, the program data is rewritable.

It is suitable to develop the program.

Features**(1) Option switching by EPROM data**

The option function of LC866200A series can be specified by EPROM data.

LC86E6232 can be checked the functions of trial piece using mass production board.

(2) Internal 32K-byte UVEPROM

32K-byte UVEPROM (ultraviolet erasable and programmable ROM) is built in. This corresponds to LC866232A/28A/24A/20A/16A.

(3) The pin compatible with mask ROM version**(4) Factory shipment**

QFC-100E

Notice for use

LC86E6232 is provided for the program development and checking the function of LC866200A series.

At using, take notice of the followings.

(1) Reset

It is necessary to be sure to go into 'L' level and hold for 200 μ s to reset terminal after power supplied voltage has been over inferior limit of supply voltage.

The option is specified until 3m's after going into 'H' level to reset terminal by degrees.

The program is executed from 0H of program counter. The output form of all parts are N-channel open drain while 'L' level to reset terminal.

(2) Option

LC86E6232 uses 256 bytes which is addressed on 7F00H~7FFFH in the program memory as option data area. This area does not affect the execution of program but the program memory capacity of LC866232A is 32512 bytes which is addressed on 0000H ~ 7BFFFH.

The option data is created by option specified program "SU866200.EXE". The created option data is linked program area by linkage loader "L866200.EXE".

Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

Specifications and information herein are subject to change without notice.

LC86E6232

(3) ROM space

(4) Points of difference LC86E6232 and LC866200A series (mask ROM version)

Item	LC86E6232	LC866232A/28A/24A/20A/16A
Operating temperatur range (Topg)	+10°C ~ +40°C	-30°C ~ 70°C
Output form of port at reset	Open drain output	Output form specified by option data
Output form of segment	Pulldown resistor	Pulldown resistor : Provided / Not provided
· S0/T0 ~ S6/T6	Not provided	Specified by option
· S7/T7 ~ S15/T15	Provided (fixed)	Provided (fixed)
· S16 ~ S23	Provided (fixed)	Specified by option
· S24 ~ S31	Provided (fixed)	Specified by option
Operating supply voltage range (VDD)	4.5 ~ 6.0V	2.5 ~ 6.0V

Option

· A kind of option corresponding LC86E6232

A kind of option	Pins, Circuits	Contents of option
Input/output form of input/output ports	Port 0 (specified in a bit)	1. Input : No Pullup MOS Tr. Output : N-channel opendrain 2. Input : Pullup MOS Tr. Output : COMS
	Port 1, 2 (specified in a bit)	1. Input : Programmable pullup MOS Tr. Output : N-channel opendrain 2. Input : Programmable pullup MOS Tr. Output : COMS
	Port 3, 4, 5 (specified in a bit)	1. Input : No programmable pullup MOS Tr. Output : N-channel opendrain 2. Input : Programmable pullup MOS Tr. Output : COMS
Pullup MOS Tr. of input port	Port 7 (specified in a bit)	1. No pullup MOS Tr. 2. Pullup MOS Tr.

LC86E6232

· A kind of option not corresponding LC86E6232

A kind of option	Pins, Circuits	Contents of option
Pulldown resistor of high voltage withstand output terminal	· S0/T0~S6/T6 · S16~S31 (specified in a bit)	1. Pulldown resistor 2. No pulldown resistor

How to use

(1) Specification of option

LC86E6232 must be programmed after specifying option data. The option is specified by "SU866200.EXE". The specified option file and the file created by our macro assembler "M866200.EXE" are linked by our linkage loader "L86620K.EXE" which creates .HEX file, then the option code is put in the option specified area (7F00H~7FFFH) of its .HEX file.

(2) How to program for EPROM

LC86E6232 can be programmed by EPROM programmer with attachment: W86EP6232Q

· Recommended EPROM programmer

Productor	EPROM programmer
Advantest	R4945, R4944, R4943
Andou	AF-9704
AVAL	PKW-1100, PKW-3000
Minato electronics	MODEL1890A

· "27512 (Vpp=12.5V) Intel high speed programming" mode available. The address must be set "0H~7FFFH" and jumper (DASEC) must be set OFF at programming.

(3) How to use the data security function

"Data security" is the function disable to read the data of EPROM.

The following is the process in order to execute data security.

1. Set 'ON' the jumper (DASEC) of attachment.
2. Program again. Then EPROM programmer displays error. The error is the reason of data security, not trouble of EPROM programmer or of LSI.

Notes

- Data security is not executed when the data of all address have 'FF' at sequence 2 above.
- The programming by sequential operation "BLANK→PROGRAM→VERIFY" cannot be executed data security at sequence 2 above.
- Set 'OFF' the jumper after execution of data security.

(4) How to eliminate

The programming data can be erased by using the EPROM eraser.

(5) Shielding

UVEPROM (ultraviolet erasable and programmable ROM) is in it. Put the seal on the window in use.

(Note 4) The currents of output transistors and pull-up transistors are ignored.

Table 1. Ceramic resonator oscillation guaranteed constant (main-clock)

A kind of oscillation	Producer	Oscillator	C1	C2
12MHz ceramic resonator oscillation	Murata	CSA12.0MTZ	33pF	33pF
		CSA12.0MT	33pF	33pF
		CST12.0MTW	on chip	
3MHz ceramic resonator oscillation	Murata	KBR-12.0M	33pF	33pF
		CSA3.00MG	33pF	33pF
		CST3.00MGW	on chip	
	Kyocera	KBR-3.0MS	47pF	47pF

* Both C1 and C2 must be used K rank ($\pm 10\%$) and SL characteristics.

Table 2. Crystal oscillation guaranteed constant (sub-clock)

A kind of oscillation	Producer	Oscillator	C3	C4
32.768kHz crystal oscillation	Dai Sinky	DT-38(1TA252E00)	18pF	18pF
	Kyocera	KF-38G-13P0200	18pF	18pF

* Both C3 and C4 must be used J rank ($\pm 5\%$) and CH characteristics.

(Not in need of high precision, use K rank ($\pm 10\%$) and SL characteristics.)

- Notes
- Since the circuit pattern affects the oscillation frequency, place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length.
 - If you use other oscillators herein, we provide no guarantee for the characteristics.
