INTEGRATED CIRCUITS

DATA SHEET

74F175AQuad D flip-flop

Product specification Supersedes data of 1996 Mar 12 IC15 Data Handbook

Quad D flip-flop

74F175A

FEATURES

- Four edge-triggered D-type flip-flops
- Buffered common clock
- Buffered asynchronous Master Reset
- True and complementary outputs
- Industrial temperature range available (-40°C to +85°C)
- PNP light loading inputs

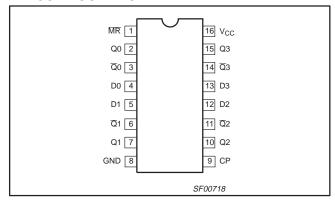

DESCRIPTION

The 74F175A is a quad, edge-triggered D-type flip-flop with individual D inputs and both Q and \overline{Q} outputs. The common buffered Clock (CP) and Master Reset (\overline{MR}) inputs load and reset (clear) all flip-flops simultaneously.

The register is fully edge-triggered. The state of each D input, one setup time before the Low-to-High clock transition is transferred to the corresponding flip-flop's Q output.

All Q outputs will be forced Low independently of clock or data inputs by a Low voltage level on the $\overline{\text{MR}}$ input. The device is useful for applications where both true and complementary outputs are required, and the CP and $\overline{\text{MR}}$ are common to all storage elements.

PIN CONFIGURATION

RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER				UNIT	
			MIN	NOM	MAX	
V _{CC}	Supply voltage		4.5	5.0	5.5	V
V _{IH}	High-level input voltage	2.0			V	
V _{IL}	Low-level input voltage			0.8	V	
I _{IK}	Input clamp current				-18	mA
I _{OH}	High-level output current				-1	mA
I _{OL}	Low-level output current				20	mA
т.		Commercial range	0		+70	°C
T _{amb}	Operating free air temperature range	Industrial range	-40		+85	°C

DC ELECTRICAL CHARACTERISTICS

(Over recommended operating free-air temperature range unless otherwise noted.)

SYMBOL	PARAMETER	TEST			LIMITS		UNIT
		CONDITION	IS ¹	MIN	TYP ²	MAX	1
V _{OH}	High-level output voltage	V _{CC} = MIN, V _{IL} = MAX, V _{IH} = MIN, I _{OH} = MAX	±10%V _{CC}	2.5			V
VOH	I lightever output voltage	$V_{IH} = MIN, I_{OH} = MAX$	±5%V _{CC}	2.7	3.4		ľ
V _{OL}	Low-level output voltage	$V_{CC} = MIN, V_{IL} = MAX,$ $V_{IH} = MIN, I_{OL} = MAX$	±10%V _{CC}		0.30	0.5	V
		$V_{IH} = MIN, I_{OL} = MAX$	±5%V _{CC}	0.30 0.5		ľ	
V_{IK}	Input clamp voltage	$V_{CC} = MIN, I_I = I_{IK}$	_		-0.73	-1.2	V
I _I	Input current at maximum input voltage	$V_{CC} = 0.0V, V_I = 7.0V$				100	μΑ
I _{IH}	High-level input current	$V_{CC} = MAX, V_I = 2.7V$				20	μΑ
I _{IL}	Low-level input current	$V_{CC} = MAX, V_I = 0.5V$			-20	μΑ	
I _{OS}	Short-circuit output current ³	V _{CC} = MAX	-60		-150	mA	
I _{CC}	Supply current (total)	V _{CC} = MAX			22	31	mA

Notes to DC electrical characteristics

- 1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
- All typical values are at V_{CC} = 5V, T_{amb} = 25°C.
 Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a high output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
