2.5-A Silicon Triacs

Features:

- *Gate sensitivity - 25 mA*
- *di/dt capability - 100 A/μs*
- *Low switching losses*
- *Low-on-state voltage at high current levels*

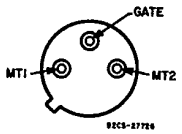
TERMINAL DESIGNATIONS



MODIFIED TO-205

These RCA triacs are gate-controlled full-wave silicon ac switches that are designed to switch from an off-state to an on-state for either polarity of applied voltage with positive or negative gate triggering voltages.

The gate sensitivity of these triacs permits the use of economical transistorized control circuits and enhances their use in low-power phase control and load-switching applications.
