

STA801M/802M**2-Output Separate Excitation Switching Type****■Features**

- 2 regulators combined 1 package
- Compact inline package
- Output current (0.5A × 2 output)
- Output voltage of Ch2 selectable from 4 levels.
- Built-in flywheel diode (Schottky barrier diode)
- Requires only 7 external components (2 outputs)
- Phase correction and output voltage adjustment performed internally
- Built-in reference oscillator (125kHz) - Compact choke coil can be used due to high frequency (compared to existing Sanken product)
- Built-in overcurrent and thermal protection circuits
- Built-in soft start circuit (Output ON/OFF control)

**■Applications**

- For BS and CS antenna power supplies
- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

■Lineup

| Part Number | Output Voltage (V) | |
|-------------|--------------------|--------------------------|
| | Ch1 | Ch2(Select one output) |
| STA801M | 5 | 9.0 / 11.5 / 12.1 / 15.5 |
| STA802M | 9 | 9.1 / 11.7 / 12.1 / 15.7 |

■Absolute Maximum Ratings

| Parameter | Symbol | Ratings | Unit |
|----------------------|------------------|---|------|
| DC Input Voltage | V _{IN} | 43 | V |
| Power Dissipation | P _{D1} | 6.7 (With infinite heatsink) | W |
| | P _{D2} | 1.6 (Without heatsink, stand-alone operation) | W |
| Junction Temperature | T _j | +125 | °C |
| Storage Temperature | T _{stg} | -40 to +125 | °C |

■Recommended Operating Conditions

| Parameter | Symbol | Ratings | | Unit |
|----------------------------------|------------------|---------------------------|------|------|
| | | min. | max. | |
| DC Input Voltage Range | V _{IN} | Ch2 V _{Omax} .+2 | 40 | V |
| Output Current Range per Channel | I _o | 0 | 0.5 | A |
| Operating Temperature Range | T _{jop} | -20 | +125 | °C |

*Efficiency indicates the value when only one channel is active. The value can be calculated as shown below. 7.5mA is deducted for the no-load circuit current of $\frac{I_{CC}}{2}$ at unused output.

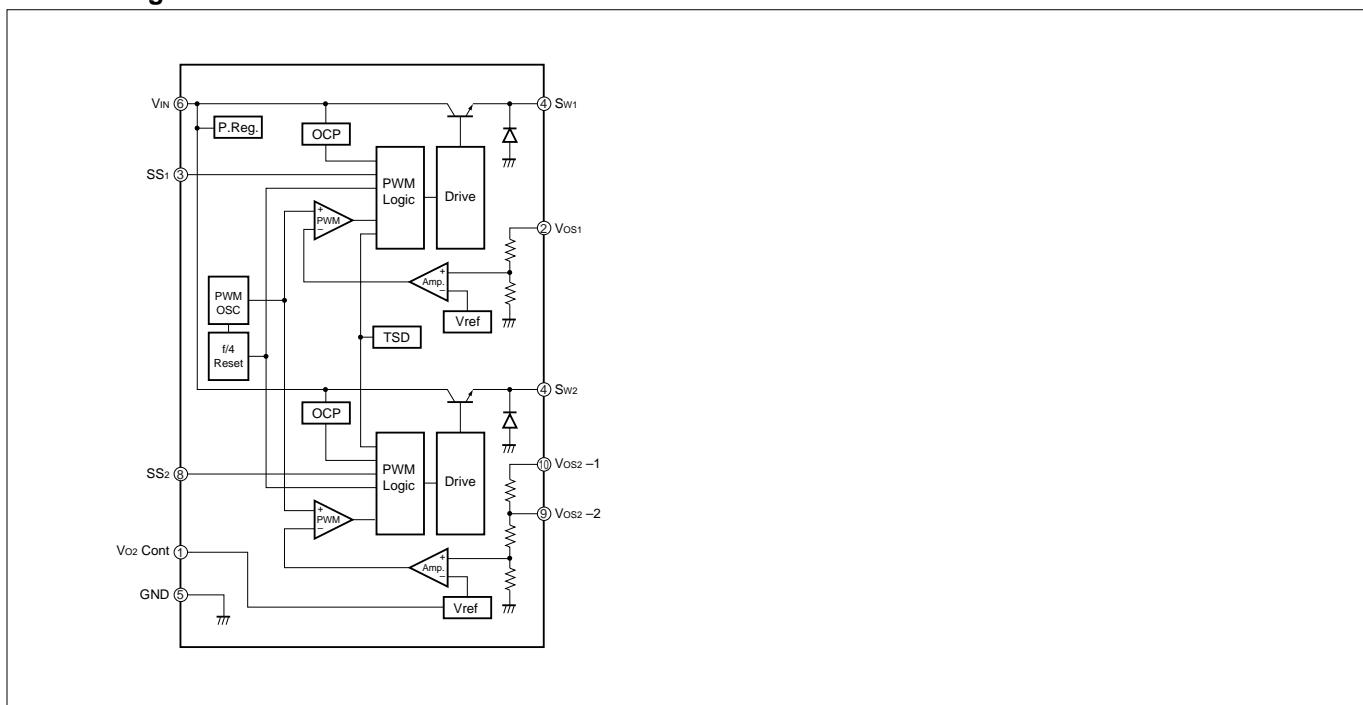

$$\eta = \frac{V_o \cdot I_o}{V_{IN} \cdot (I_{IN} - 0.0075)} \times 100(%)$$

■Block Diagram

■Standard External Circuit

■Ta-PD Characteristics

■Selecting External Components

1. Inductors L₁ and L₂

(1) Suitable for switching regulators

Do not use a coil as a noise filter because it generates excess heat.

(2) Appropriate inductance

A low inductance may cause abnormal oscillation, or cause the overcurrent protection circuit to malfunction in the rated current range.

(3) Satisfying the rated current

Exceeding the rated current may generate an extremely high current to flow due to magnetic saturation.

2. Capacitors C₁, C₂, and C₃

(1) Satisfy the breakdown voltage and allowable ripple current

Exceeding the ratings of these capacitors or using them without derating may shorten their service lives and also cause abnormal oscillation.

(2) Low impedance (C₂, and C₃)

A low-impedance model is recommended for C₂ and C₃ to reduce the ripple voltage and stabilize switching. For stable operation throughout the input voltage range, however, the DC equivalent series resistance (ESR) of C₂ and C₃ should be 0.1 ohm or less.

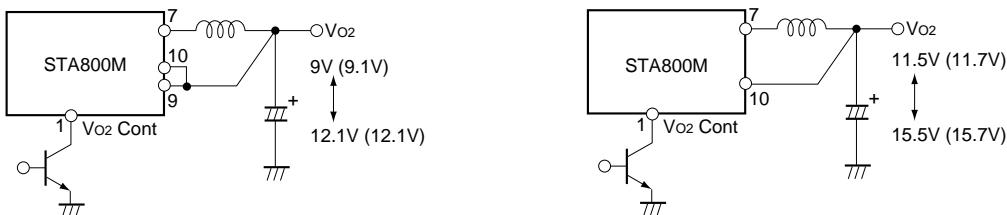

3. Capacitors C₄ and C₅

(1) C₄ and C₅ are soft-start capacitors.

■Selecting Ch2 Output Voltage

When the V_{O2Cont} terminal voltage is set to 0.5V or less, the output voltage changes to the values shown below. To switch the potential at the V_{O2Cont} terminal, drive the open collector of the transistor. No external voltage can be applied to the terminal. Leave the terminal open when not in use because the terminal is already pulled up in the IC. When using terminal no. 9, short it to terminal no. 10.

(): STA802M

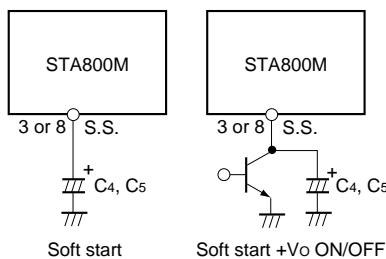

V_{O2} output voltage

| V _{O2Cont} terminal (1 pin) | STA801M | | STA802M | | Low : 0.5V or less |
|---|---------|-------|---------|-------|--------------------|
| | OPEN | Low | OPEN | Low | |
| 9pin | 9V | 12.1V | 9.1V | 12.1V | |
| 10pin | 11.5V | 15.5V | 11.7V | 15.7V | |

■Soft Start ON/OFF Circuit

Terminal nos. 3 and 8 are soft start terminals. Connect a capacitor to the terminal to permit a soft start. Output can be turned on and off by using the soft start terminals. Set the soft start terminal voltage to V_{SSL} (0.15V) or less to stop the output. To switch the potential at the soft start terminals, drive the open collector of the transistor. Since the discharge currents from C₄ and C₅ flow to the ON/OFF control transistor, limit the current for protection. The SS terminal is pulled up to the power supply in the IC and no external voltage can be applied to the terminal.

■Typical Characteristics

($T_a=25^\circ\text{C}$)
