## 4-BIT ARITHMETIC LOGIC UNIT

### DESCRIPTION

The T54LS181/T74LS181 is a 4-bit Arithmetic Logic Unit (ALU) which can perform all possible 16 logic, operations on two variables and a variety of arithmetic operations.

**B1**  
Plastic Package

**D1/D2**  
Ceramic Package

ORDERING NUMBERS:  
T54LS181 D2  
T74LS181 D1  
T74LS181 B1

- PROVIDES 16 ARITHMETIC OPERATIONS  
ADD, SUBTRACT, COMPARE, DOUBLE, PLUS  
TWELVE OTHER ARITHMETIC OPERATIONS
- PROVIDES ALL 16 LOGIC OPERATIONS OF  
TWO VARIABLES:  
— EXCLUSIVE-OR, COMPARE, AND, NAND,  
OR, NOR, PLUS TEN OTHER LOGIC  
OPERATIONS
- FULL LOOKAHEAD FOR HIGH SPEED  
ARITHMETIC OPERATION ON LONG WORDS
- INPUT CLAMP DIODES

### PIN NAMES

$\bar{A}_0\text{-}\bar{A}_3, \bar{B}_0\text{-}\bar{B}_3$	Operand (Active LOW) Inputs
$S_0\text{-}S_3$	Function-Select Inputs
M	Mode Control Input
$C_n$	Carry Input
$\bar{F}_0\text{-}\bar{F}_3$	Function (Active LOW) Outputs
A = B	Comparator Output
$\bar{G}$	Carry Generate (Active LOW) Output
$\bar{P}$	Carry Propagate (Active LOW) Output
$C_{n+4}$	Carry Output

## LOGIC DIAGRAM

## ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply Voltage	-0.5 to 7	V
$V_I$	Input Voltage, Applied to Input	-0.5 to 15	V
$V_O$	Output Voltage, Applied to Output	-0.5 to 10	V
$I_I$	Input Current, Into Inputs	-30 to 5	mA
$I_O$	Output Current, Into Outputs	50	mA

Stresses in excess of those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions in excess of those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## GUARANTEED OPERATING RANGES

Part Numbers	Supply Voltage			Temperature
	Min	Typ	Max	
T54LS181D2	4.5 V	5.0 V	5.5 V	-55°C to +125°C
T74LS181XX	4.75 V	5.0 V	5.25 V	0°C to +70°C

XX = package type.

L = LOW Voltage Level, H = HIGH Voltage Level.  
 \*Each bit is shifted to the next more significant position.  
 \*\*Arithmetic operations expressed in 2s complement notation.

**FUNCTIONAL DESCRIPTION**

The T54LS181/T74LS181 is a 4-bit high speed Arithmetical Logic Unit (ALU). Controlled by the four Function Select Inputs (S<sub>0</sub>...S<sub>3</sub>) and the Mode Control Input (M), it can perform all the possible 16 possible logic operations or 16 different arithmetic operations on active HIGH or active LOW operands. The Function Table lists these operations.

When the Mode Control Input (M) is HIGH, all internal carries are inhibited and the device performs logic operations on the individual bits as listed. When the Mode Control Input is LOW, the carries are enabled and the device performs arithmetic operations on the two 4-bit words. The device incorporates full internal carry lookahead and provides for either ripple carry between devices using the C<sub>n+4</sub> output, or for carry lookahead between packages using the single P (carry Propagate) and G (Carry Generate). P and G are not affected by carry in. When speed requirements are not stringent, the LS181 can be used in a simple ripple carry mode by connecting the Carry Output (C<sub>n+4</sub>) signal to the Carry Input (C<sub>n</sub>) of the next unit. For high speed operation the LS181 is used in conjunction with other carry lookahead circuits. One carry lookahead package is required for each group of four LS181 devices. Carry lookahead can be pro-

vided at various levels and offers high speed capability over extremely long word lengths.

The A = B output from the LS181 goes HIGH when all four F outputs are HIGH and can be used to indicate logic equivalence over four bits when the unit is in the subtract mode. The A = B output is open collector and can be wired - AND with other A = B outputs to give a comparison for more than four bits. The A = B signal can also be used with the C<sub>n+4</sub> signal to indicate A > B and A < B.

The Function Table lists the arithmetic operations that are performed without a carry in. An incoming carry adds a one to each operation. Thus, select code LHHH generates A minus B minus 1 (2s complement notation) without a carry in and generates A and B when a carry is applied. Because subtraction is actually performed by complementary addition (1s complement), a carry out means borrow; thus a carry is generated when there is no underflow and no carry is generated when there is underflow.

As indicated, the LS181 can be used with either active LOW inputs producing active LOW outputs or with active HIGH inputs producing active HIGH outputs. For either case the table lists the operations that are performed to the operands labeled inside the logic symbol.

## DC CHARACTERISTICS OVER OPERATING TEMPERATURE RANGE

Symbol	Parameter		Limits			Test Conditions (Note 1)	Units	
			Min.	Typ.	Max.

Condition B (Note 3)	74		21	37				

### Notes:

- Conditions for testing, not shown in the Table, are chosen to guarantee operation under "worst case" conditions.
- Not more than one output should be shorted at a time.
- With output open,  $I_{CC}$  is measured for the following conditions:
  - $S_0$  through  $S_3$ , M and A inputs are at 4.5V, all other inputs are grounded.
  - $S_0$  through  $S_3$  and M are at 4.5V, all other inputs are grounded.
- Typical values are at  $V_{CC} = 5.0\text{V}$ ,  $T_A = 25^\circ\text{C}$
