

LM2940

LINEAR INTEGRATED CIRCUIT

1A LOW-DROPOUT POSITIVE VOLTAGE REGULATOR

■ DESCRIPTION

The UTC **LM2940** is a low dropout regulator designed to provide output current up to 1A with a typically 500mV dropout Voltage and a maximum of 1V. It is capable of reducing the ground current when the differential between the input voltage and the output voltage outrun 3V.

UTC LM2940 offers low quiescent current (typically 30mA at 1A and an input-output differential of 5V). Higher quiescent currents only exist when the regulator is in the dropout mode ($V_{IN}-V_{OUT} \leq 3V$).

■ FEATURES

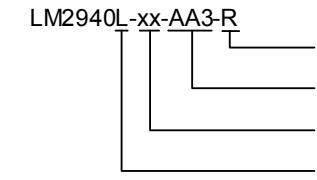

- * 500mV typically dropout at 1A
- * Output current in excess of 1A
- * Low quiescent current
- * Reversed-battery protection
- * Current limit and thermal shutdown.
- * Mirror image insertion protection

■ TYPICAL APPLICATION

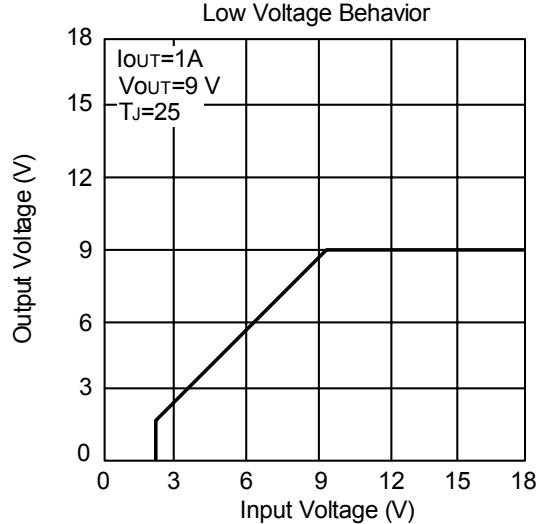

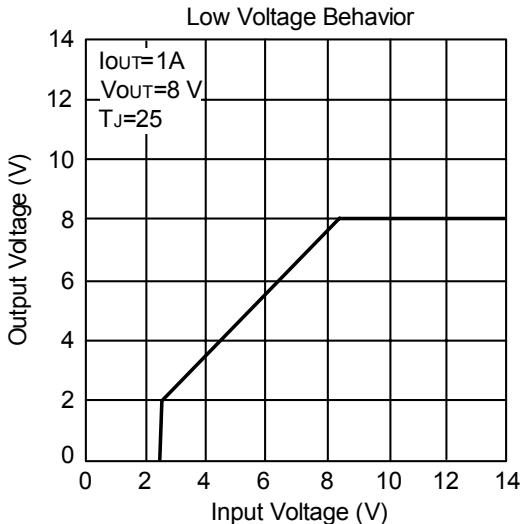

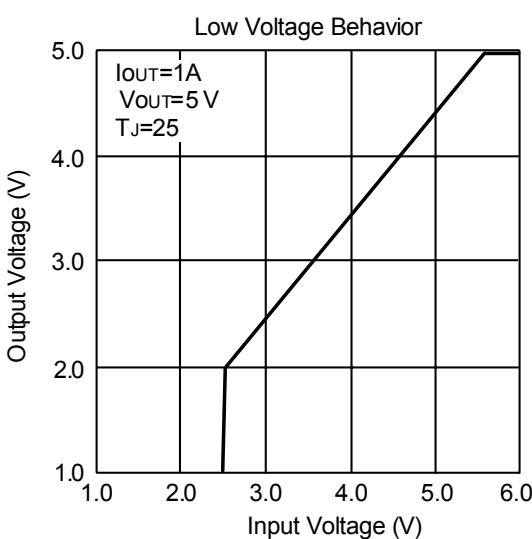

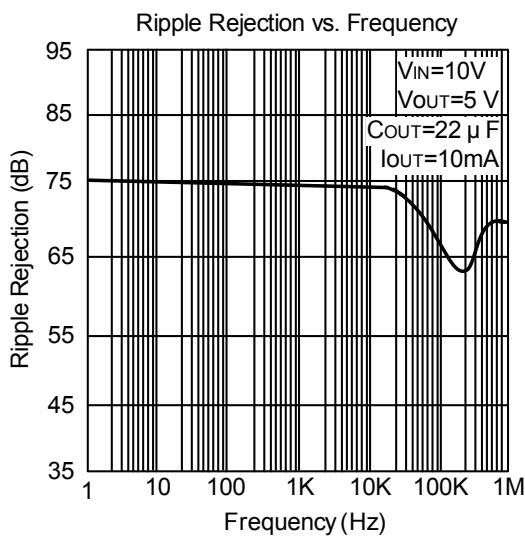

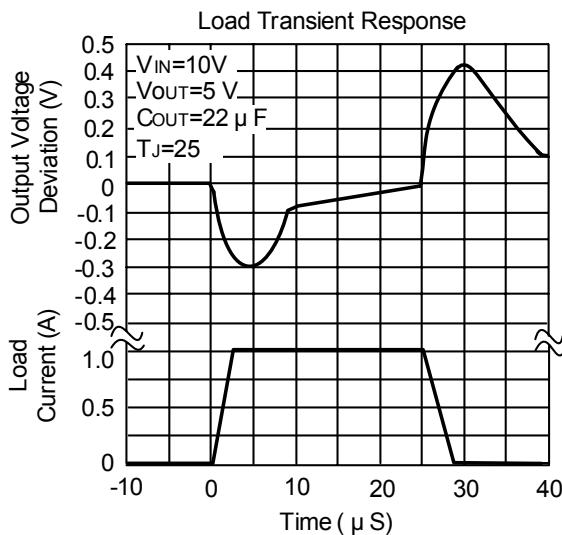

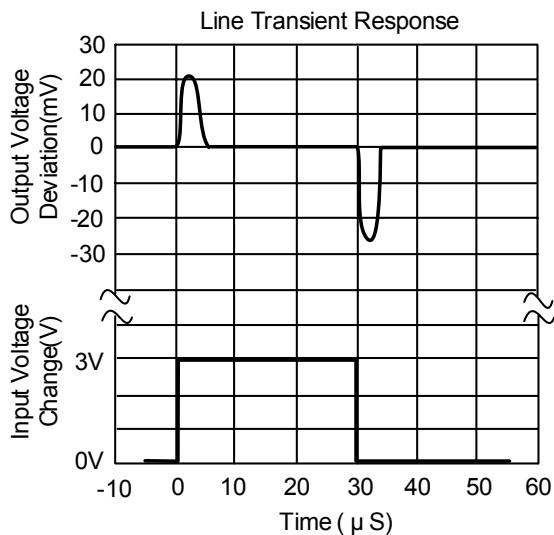

Note: 1. C_1 is required if regulator is located far from power supply filter.

2. C_{OUT} must be higher than $22\mu F$ for stability, and locate as close as possible to the regulator.
