

FEATURES

- ANADIGICS developed technologies (InGaP HBT/pHEMT)
- High Module Efficiency:
 45% GSM900 (Equivalent 57% PA Efficiency)
 40% DCS (Equivalent 52% PA Efficiency)
- Fully Compliant Harmonics Under Mismatch
- Integrated Power Control Scheme
- Integrated Reference Voltage
- Integrated PA/Switch/Low Pass Filters
- Symmetrical low loss receive paths
- High isolation switch (TX to RX, RX on/off)
- ESD protected antenna port (15 kV)
- Small footprint (6 mm x 6 mm x 1.0 mm)
- GPRS capable (class 12)
- Power control range >50dB

APPLICATIONS

- Dual/Tri/Quad Band Handsets and PDAs

PRODUCT DESCRIPTION

The AWT6202 is the third generation GSM PowerPlexer™. It has been developed to minimize time to market for GSM handset and PDA designers.

This highly integrated module requires only basic RF decoupling and DC blocking on the receive and antenna ports. All the RF ports are 50 Ω. The part also has an excellent ESD rating of 1 kV on RF inputs and 15 kV on the antenna port.

The temperature stability of the high gain HBT PAs are ideal for supporting class 12 GPRS, while the low loss pHEMT switch provides high isolation with very low current consumption.

The integrated power control scheme reduces the number of external components associated with a power control function, and facilitates fast and easy production calibration. The power control range is typically 55 dB.

ELECTRICAL CHARACTERISTICS

Table 1: Absolute Minimum and Maximum Ratings

PARAMETER	MIN	MAX	UNIT
Supply Voltage (V_{CC})	-	+7	V
Input Power (RF_{IN})	-	+11	dBm
Power Control Voltage (V_{RAMP})	-	1.8	V
Storage Temperature (T_{STG})	-55	150	°C
Maximum Reflow Temperature	-	240	°C

Exceeding the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operations sections of this data sheet. Exposure to maximum ratings for extended periods can adversely affect device reliability.

Table 2: ESD Ratings

PARAMETER	METHOD	RATING	UNIT
ESD Threshold Voltage (Antenna Port)	HBM	15	kV
ESD Threshold Voltage (Control Inputs)	HBM	1	kV
ESD Threshold Voltage (RF Inputs)	HBM	1	kV
ESD Threshold Voltage (RX Ports)	HBM	300	V

Although protection circuitry has been designed into this device, proper precautions should be taken to avoid exposure to electrostatic discharge (ESD) during handling and mounting. Human body model HBM employed is resistance = 1500 Ω , capacitance = 100pF.

MODE	CNTL 1	CNTL2	CNTL3	DESCRIPTION
SHUTDOWN	0	0	0	Low current state where module is disabled.
GSM850_RX_EN	1	0	1	This mode enables a low loss path from the antenna to GSM850_RX port. PAs are disabled.
GSM900_RX_EN	0	1	0	This mode enables a low loss path from the antenna to GSM900_RX port. PAs are disabled.
DCS_RX_EN	1	1	0	This mode enables a low loss path from the antenna to DCS_RX port. PAs are disabled.
PCS_RX_EN	0	0	1	This mode enables a low loss path from the antenna to PCS_RX port. PAs are disabled.
GSM_TX_EN	1	0	0	Switch is in transmit mode and GSM850/900 PA is enabled.
DCS_PCS_TX_EN	1	1	1	Switch is in transmit mode and DCS/PCS PA is enabled.
Not Used	0	1	1	Not Used. PAs Disabled.
