

# HIGH SENSITIVITY RELAY WITH GUARANTEED LOW LEVEL SWITCHING CAPACITY

# **SX-RELAYS**

mm inch

#### **FEATURES**

# 1. High contact reliability over a long life has been made possible for low level loads.

Using a low level load (1 mV 10 $\mu$ A to 10 V 10 mA) 10 $^7$  operations were achieved with a static contact resistance of Max. 100 m $\Omega$  (voltage drop of 20 mV, 1 mA, 1 kHz) and a dynamic contact resistance of Max. 1  $\Omega$  (Measurement delay 10 ms, voltage drop of 20 mV, 1 mA, 1 kHz).

#### 2. High sensitibity of 50 mW

By using the highly efficient polar magnetic circuit "seesaw balance armature mechanism", a rated power consumption of 50 mW (for single side stable type) has been achieved.

3. Low thermal electromotive force Reducing the heat from the coil enables a thermal electromotive force of 3  $\mu$ V or less

#### **SPECIFICATIONS**

#### Contact

Arrangement		2 Form C		
electric life te	t resistance (During initial and sts)*1 rop of 20 mV 1 mA [1kHz])	Max. 100 mΩ		
electric life te (By voltage d	tact resistance (During initial and sts)*1 rop of 20 mV 1 mA[1 kHz], Meaay 10 ms after applying nominal	Max. 1 Ω		
Contact mate	rial	Gold-clad silver alloy		
	Nominal switching capacity (resistive load)	10 mA 10 VDC		
	Max. switching power	0.1 W		
Rating	Max. switching voltage	10 VDC		
	Max. switching current	10 mA DC		
	Min. switching capacity**1	10 μA 1 mVDC		
	Single side stable	50mW (1.5 to 12 V DC) 70mW (24 V DC)		
Nominal operating power	1 coil latching	35mW (1.5 to 12 V DC) 50mW (24 V DC)		
power	2 coil latching	70mW (1.5 to 12 V DC) 150mW (24 V DC)		
	tromotive force, max. oltage applied to the coil**2)	3 μV		
Expected	Mechanical (at 750 cpm)	5 × 10 <sup>7</sup>		
life (min. operations)	Electrical (at 750 cpm) (10 mA 10 V DC resistive load)	107		

#### Notes:

- \*\*1 This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
- \*\*2 For single side stable only.

#### Characteristics

Initial insulat	ion resistance	Min. 10,000MΩ (at 500V DC)		
Initial	Between ope	en contacts	750 Vrms for 1min.	
breakdown	Between cor	ntact sets	1,000 Vrms for 1min.	
voltage*3	Between cor	ntact and coil	1,800 Vrms for 1min.	
Operate time	[Set time]*4 (	at 20°C)	Max. 5 ms (Approx. 3 ms) [Max. 5 ms (Approx. 3 ms)]	
Release time [Reset time]*	e (without dioc 4 (at 20°C)	Max. 5 ms (Approx. 1.5 ms) [Max. 5 ms (Approx. 3 ms)]		
Temperature	rise*5 (at 20°	Max. 50°C		
01 1 1		Functional*6	Min. 750 m/s <sup>2</sup> {75G]	
Shock resista	ance	Destructive*7	Min. 1,000 m/s <sup>2</sup> {100G]	
Vibration res	iatanaa	Functional*8	10 to 55 Hz at double amplitude of 3.3 mm	
vibration res	istance	Destructive	10 to 55 Hz at double amplitude of 5 mm	
Conditions for transport and	d storage*9	Ambient temperature	-40°C to 70°C -40°F to 158°F	
(Not freezing densing at lot ture)		Humidity	5 to 85% R.H.	
Unit weight			Approx. 2 g .071 oz	

#### Remarks:

- \* Specifications will vary with foreign standards certification ratings.
- \*1 By nominal switching capacity: No. of operations: 107
- \*2 Measurement at same location as "Initial breakdown voltage" section.
- \*3 Detection current: 10mA.
- \*4 Nominal voltage applied to the coil, excluding contact bounce time.
- \*5 By resistive method, nominal voltage applied to the coil; contact carrying current:
- $^{*6}$  Half-wave pulse of sine wave: 6 ms; detection time: 10 $\mu$ s.
- \*7 Half-wave pulse of sine wave: 6 ms.
- \*8 Detection time: 10μs.
- \*9 Refer to 5. Conditions for operation, transport and storage mentioned in AMBIENT ENVIRONMENT (Page 61)

# TYPICAL APPLICATIONS

This relay will be used for the small load for measuring instruments or others where a stable contact resistance is required.

## **ORDERING INFORMATION**

Ex. ASX 2 0 0 A 1 H Z										
Contact arrangement	Operating function	Type of operation	Terminal shape	Coil voltage (DC)	Packing style					
2: 2 Form C	0: Single side stable 1: 1 coil latching 2: 2 coil latching	0: Standard type (B.B.M.)	Nil: Standard PC board terminal A: Surface-mount terminal	1H: 1.5V 09: 9V 03: 3V 12: 12V 4H: 4.5V 24: 24V 06: 6V	Nil: Tube packing Z: Tape and reel packing (piked from 8/9/10/12 pin side)					

Note: Tape and reel packing symbol "-Z" is not marked on the relay. "X" type tape and reel packing (picked from 1/3/4/5-pin side) is also available. Suffix "X" instead of "Z".

# TYPES AND COIL DATA (at 20°C 68°F)

### (1) Standard PC board terminal

- 1) Standard packing: 40 pcs. in an inner package (tube); 1,000 pcs. in an outer package
- 2) Specified value of pick-up, drop-out, set and reset voltage is with the condition of square wave coil pulse. Single side stable

Part No.		Pick-up voltage,	Drop-out	Nominal		Nominal	Max. allowable
Standard PC board terminal	Coil Rating, V DC	V DC (max.) (initial)	voltage, V DC (min.) (initial)	operating current, mA (±10%)	Coil resistance, Ω (±10%)	operating power, mW	voltage, V DC

### REFERENCE DATA

1. Switching capacity range

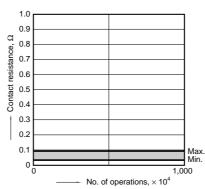

2-(1). Change in dynamic contact resistance (10 mA 10 V DC resistive load)

Tested: ASX20012, Quantity: n=10

Operating frequency: 750 cpm

Measured condition: 10 ms after applying nominal coil voltage, using voltage drop of 20 mV, 1 mA, 1 kHz.

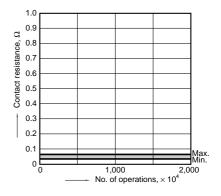

2-(2). Change in dynamic contact resistance (10 µA 1 mV DC resistive load)

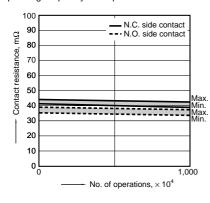

Tested: ASX20012, Quantity: n=10

Operating frequency: 750 cpm

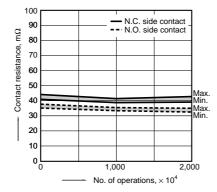

Measured condition: 10 ms after applying nominal coil voltage, using voltage drop of 20 mV, 1 mA, 1 kHz.

3-(1). Change in static contact resistance (10 mA 10 V DC resistive load) Tested: ASX20012, Quantity: n=10 Operating frequency: 750 cpm

3-(2). Change in static contact resistance (10 µA 1 mVDC resistive load) Tested: ASX20012, Quantity: n=10 Operating frequency: 750 cpm

#### NOTES

#### 1. Coil operating power

- 1) As a general rule, only a pure DC power supply should be used for the coil drive. 2) To ensure proper operation, the voltage applied to both terminals of the coil should be ±5% (at 20°C 68°F) the rated operating voltage of the coil. Also, be aware that the pick-up and drop-out voltages will fluctuate depending on the ambient temperature and operating conditions.
- 3) The ripple factor for the voltage applied to the coil should be less than 5%.
- 4) For set and reset latching relays, the rated operating voltage should be applied to the coil for 10 ms or more.

#### 2. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

#### 3. External magnetic field

Since SX relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

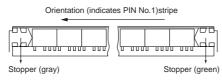

#### 4. Cleaning

In automatic cleaning, cleaning with the boiling method is recommended. Avoid ultrasonic cleaning which subject the relay to high frequency vibrations. It may cause the contacts to stick.

It is recommended that a fluorinated hydrocarbon or other alcoholic solvent be used

#### 5. Packing style

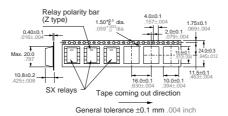

1) The relay is packed in a tube with the relay orientation mark on the left side, as shown in the figure below.

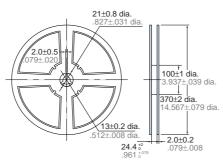

2) Tape and reel packing

(1) Tape dimensions

mm inch

(2) Dimensions of plastic reel mm inch

#### 6. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

Chucking pressure in the direction A: 4.9 N {500 gf} or less

Chucking pressure in the direction B: 9.8 N {1 kgf} or less

Chucking pressure in the direction C: 9.8 N {1 kgf} or less

Please chuck the portion.

Avoid chucking the center of the relay.

In addition, excessive chucking pressure to the pinpoint of the relay should be also avoided.

For Cautions for Use, see Relay Technical Information (Page 48 to 76).
