

Smart Power High-Side-Switch for Industrial Applications

Features

- Overload protection
- Current limitation
- Short circuit protection
- Thermal shutdown with restart
- ESD - Protection
- Overvoltage protection (including load dump)
- Fast demagnetization of inductive loads
- Reverse battery protection with external resistor
- Open drain diagnostic output
- CMOS compatible input
- Loss of GND and loss of V_{bb} protection
- Very low standby current

Product Summary

Overvoltage protection	$V_{bb(AZ)}$	41	V
Operating voltage	$V_{bb(on)}$	5 ... 34	V
On-state resistance	R_{ON}	350	mΩ
Nominal load current	$I_{L(nom)}$	0.4	A
Operating temperature	T_a	-30...+85	°C

PG-DSO-8

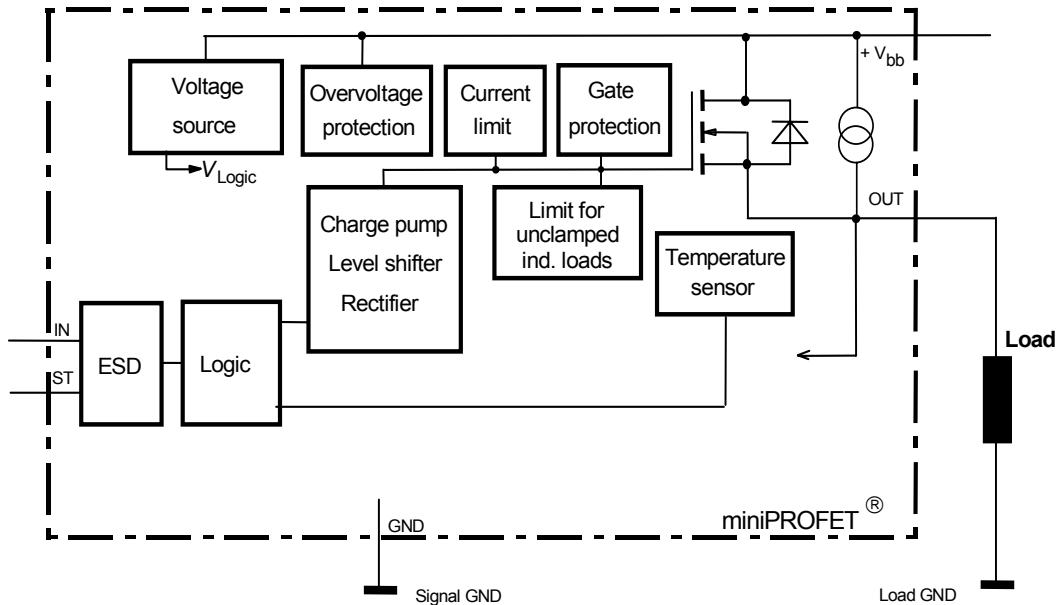

Application

- All types of resistive, inductive and capacitive loads
- µC compatible power switch for 12 V and 24 V DC industrial applications
- Replaces electromechanical relays and discrete circuits

General Description

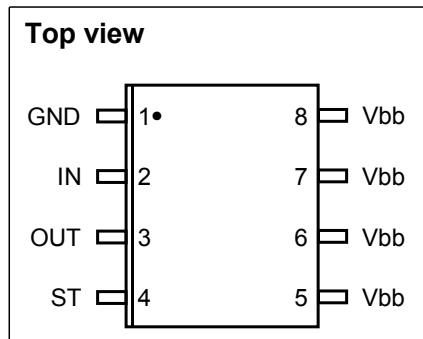

N channel vertical power FET with charge pump, ground referenced CMOS compatible input and diagnostic feedback, monolithically integrated in Smart SIPMOS® technology. Providing embedded protective functions.

Thermal resistance @ 6 cm ² cooling area ¹⁾	$R_{th(JA)}$	-	70	83	

¹⁾Device on 50mm*50mm*1.5mm epoxy PCB FR4 with 6 cm² (one layer, 70µm thick) copper area for drain connection. PCB is vertical without blown air. (see page 17)

²⁾not subject to production test, specified by design

³⁾ $V_{Loaddump}$ is setup without the DUT connected to the generator per ISO 7637-1 and DIN 40839 .

Supply voltages higher than $V_{bb(AZ)}$ require an external current limit for the GND pin, e.g. with a 150Ω resistor in GND connection. A resistor for the protection of the input is integrated.

Drain-source diode voltage ($V_{OUT} > V_{bb}$) $T_j = 150^\circ\text{C}$	$-V_{ON}$	-	600	-	mV

¹⁾ Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.

²⁾ see also $V_{ON(CL)}$ in circuit diagram on page 8

³⁾ Requires a $150\ \Omega$ resistor in GND connection. The reverse load current through the intrinsic drain-source diode has to be limited by the connected load. Power dissipation is higher compared to normal operating conditions due to the voltage drop across the drain-source diode. The temperature protection is not active during reverse current operation! Input current has to be limited (see max. ratings page 3).
