

## FEATURES

- **Guaranteed AC performance over temperature and voltage:**
  - > 4GHz  $f_{MAX}$  input
  - < 160ps  $t_r/t_f$
  - < 440ps  $t_{pd}$
- **3.3V and 5V power supply operation**
- **100k ECL/PECL compatible I/O**
- **Internal 75K $\Omega$  input pull-down resistors**
- **Wide operating temperature range: -40°C to +85°C**
- **Available in ultra-small 8-pin MLF® (2mm x 2mm) package**

Precision Edge®

## DESCRIPTION

The SY89312V is an integrated ÷2 divider with differential clock inputs. It is functionally equivalent to the SY100EP32V but in an ultra-small 8-lead MLF® package that features a 70% smaller footprint.

The  $V_{BB}$  pin, an internally generated voltage supply, is available for this device only. For single-ended input conditions, the unused differential input is connected to  $V_{BB}$  as a switching reference voltage.  $V_{BB}$  may also bias AC-coupled inputs. When used, decouple  $V_{BB}$  and  $V_{CC}$  via a 0.01 $\mu$ F capacitor and limit current sourcing or sinking to 0.5mA. When not used,  $V_{BB}$  should be left open.

The reset pin is asynchronous and is asserted when it is high. Upon power-up, the internal flip-flops will be in a random state; the reset allows for the synchronous use of multiple SY89312Vs in a system.

**PIN DESCRIPTION**

Pin Number	Pin Name	Type	Pin Function
2, 3	CLK, /CLK	100K ECL/PECL Input	Differential PECL/ECL Input: Internal 75kΩ pull-down resistor. If left open, pin defaults LOW. See “Input Interface Applications” section for single-ended inputs.
7, 6	Q, /Q	100K ECL/PECL Output	Differential PECL/ECL Output: Output CLK input divided by 2. See “Output Interface Applications” section for recommendations on terminations.
8	VCC	Positive Power Supply	Positive Power Supply: Bypass with 0.1μF//0.01μF low ESR capacitors.
5	VEE, Exposed Pad	Negative Power Supply	Negative Power Supply: V <sub>EE</sub> and Exposed pad must be tied to most negative supply. For PECL/LVPECL connect to ground.
4	VBB	Reference Voltage Output	Bias Reference Voltage: VCC–1.4V. Used as reference voltage for single-ended inputs or AC-coupling to the CLK, /CLK inputs. Max sink/source is ±0.5mA. See “Input Interface Applications” section.
1	Reset	100k ECL/PECL Input	Single-ended Input: PECL/ECL Asynchronous reset.

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Due to the limited drive capability use for input of the same package only.
4. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.
5.  $V_{IHCMR}(\min)$  varies 1:1 with  $V_{EE}$ . (max) varies 1:1 with  $V_{CC}$ .

**AC ELECTRICAL CHARACTERISTICS<sup>(6)</sup>**
