## 4-bit Parallel-Access Shift Register

# HITACHI

---

### Description

This shift register features parallel inputs, parallel outputs, J- $\bar{K}$  serial inputs, Shift/Load control input, and a direct overriding clear. This shift register can operate in two modes: Parallel load; shift from Q<sub>A</sub> towards Q<sub>D</sub>.

Parallel loading is accomplished by applying the four bits of data, and taking the Shift/Load control Input low. The data is loaded into the associated flip-flops and appears at the outputs after the positive transition of the clock input. During parallel loading, serial data flow is inhibited. Serial shifting occurs synchronously when the Shift/Load control input is high. Serial data for this mode is entered at the J- $\bar{K}$  inputs. These inputs allow the first stage to perform as a J- $\bar{K}$  or toggle flip-flop as shown in the function table.

### Features

- High Speed Operation:  $t_{pd}$  (Clock to Q) = 13 ns typ ( $C_L = 50$  pF)
- High Output Current: Fanout of 10 LSTTL Loads
- Wide Operating Voltage:  $V_{CC} = 2$  to 6 V
- Low Input Current: 1  $\mu$ A max
- Low Quiescent Supply Current:  $I_{CC}$  (static) = 4  $\mu$ A max ( $T_a = 25^\circ\text{C}$ )

H : high level (steady state)

L : low level (steady state)

X : don't care

 : transition from low to high level.

a, b, c, d : the level of steady-state input at inputs A, B, C or D respectively.

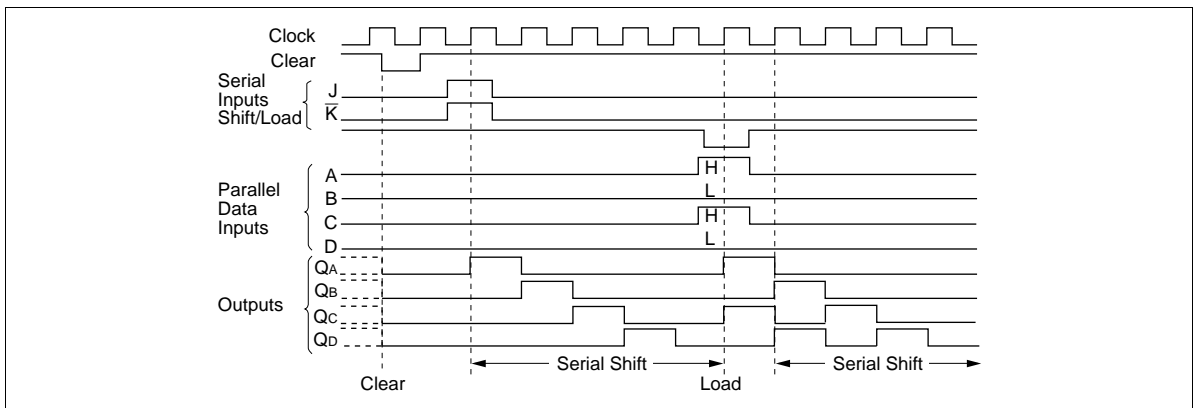

$Q_{A0}$ ,  $Q_{B0}$ ,  $Q_{C0}$ ,  $Q_{D0}$  : the level of  $Q_A$ ,  $Q_B$ ,  $Q_C$  or  $Q_D$  respectively, before the indicated steady-state input conditions were established.

$Q_{An}$ ,  $Q_{Bn}$ ,  $Q_{Cn}$ ,  $Q_{Dn}$  : the level of  $Q_A$ ,  $Q_B$ ,  $Q_C$  or  $Q_D$  respectively before the most recent  transition of the clock.

2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
5. This product is not designed to be radiation resistant.
