Decoder with Data Output Pins

After Power On SM5212D is set in Address search mode, if SM5212D finds 3 consecutive Address that matches the Address setting of SM5212D. SM5038RF will enter Data Compare mode. It will compare perviously 3 received data, if they match then SM5212D will set VT high and send data O/P.

Single Resistor Oscillator

SM5212D's oscillator can be constructed by connecting a resistor between OSC1 and OSC2 pin.

Encoder OSC Frequency

The recommended oscillator frequency is $F_{oscD} (SM5212D \text{ decoder}) = 10 F_{oscD} (SM5212E \text{ encoder})$
