Product Preview Coaxial Cable Driver

- 225ps Propagation Delay
- 3.5 GHz Toggle Frequency
- 1.4V Output Swings
- PECL mode: 3.0V to 5.5V V_{CC} with $V_{EE} = 0V$
- ECL mode: 0V V_{CC} with $V_{EE} = -3.0V$ to $-5.5V$
- Internal Input Resistors: Pulldown on D, Pulldown and Pullup on \bar{D}
- Q Output will default LOW with inputs open or at V_{EE}
- ESD Protection: >4KV HBM, >200V MM
- New Differential Input Common Mode Range
- Moisture Sensitivity Level 1, Indefinite Time Out of Drypack
- Flammability Rating: UL-94 code V-0 @ 1/8", Oxygen Index 28 to 34
- Transistor Count = 152 devices

The MC10EP89 is a differential fanout gate specifically designed to drive coaxial cables. The device is especially useful in digital video broadcasting applications; for this application, since the system is polarity free, each output can be used as an independent driver. The driver produces swings 70% larger than a standard ECL output. When driving a coaxial cable, proper termination is required at both ends of the line to minimize signal loss. The 1.4V swings allow for termination at both ends of the cable, while maintaining the 680mV swing at the receiving end of the cable. Because of the larger output swings, the device cannot be terminated into the standard $V_{CC} - 2.0V$. All of the DC parameters are tested with a 50Ω to $V_{CC} - 3.0V$ load. The driver accepts a standard differential ECL input and can run off of the digital video broadcast standard $-5.0V$ supply.
