OPU813, OPU813R

Reflector-Type Photo Interrupter

GENERAL DESCRIPTION

The OPU813 and OPU813R are reflector-type photo interrupters that have been developed for reading 0.17mm bar codes.

FEATURES

- Aspherical lenses control a bundle of rays accurately.
- Integrated molding of the lens with the case yields good alignment accuracy and small dispersions of the characteristics.
- The Connector is integrally molded with the case and is compatible with an IL-Y type connector made by Japan Aviation Electronic Ind., Ltd.
- Assembling without an adhesive and solder achieves the high quality.
- Lens part is not directly exposed to the external environment. Therefore, paper powder scarcely deposits on the reading part.
- S/N ratio is improved by optically separating the light emitting part and receiving part with light shielding wall.

APPLICATIONS

- Bar code reader
- Paper edge sensor (Printer, Plotter)
- Detector of small electronic components such as a chip resistor, chip capacitor, etc.
- Detection of the front and back sides of small electronic components

PIN CONFIGURATION

OPU813, OPU813R

(Unit: mm)

Pin Connection

- ① LED Anode
- ② LED Cathode
- ③ PTr Emitter
- ④ PTr Collector
