1. Application

This data sheet applies to a color TFT LCD module, PD104SL3.

PD104SL3 module applies to notebook PC, sub-note-book PC and other OA product, which require high quality flat panel display. <u>This module is not designed for aerospace, avionics, medical, F/A, transportation, car or any other products, which require extreme level of reliability.</u>

Prime View assume no responsibility for any damage resulting from the use of the device which dose not comply with the instructions and the precautions in these specification sheet.

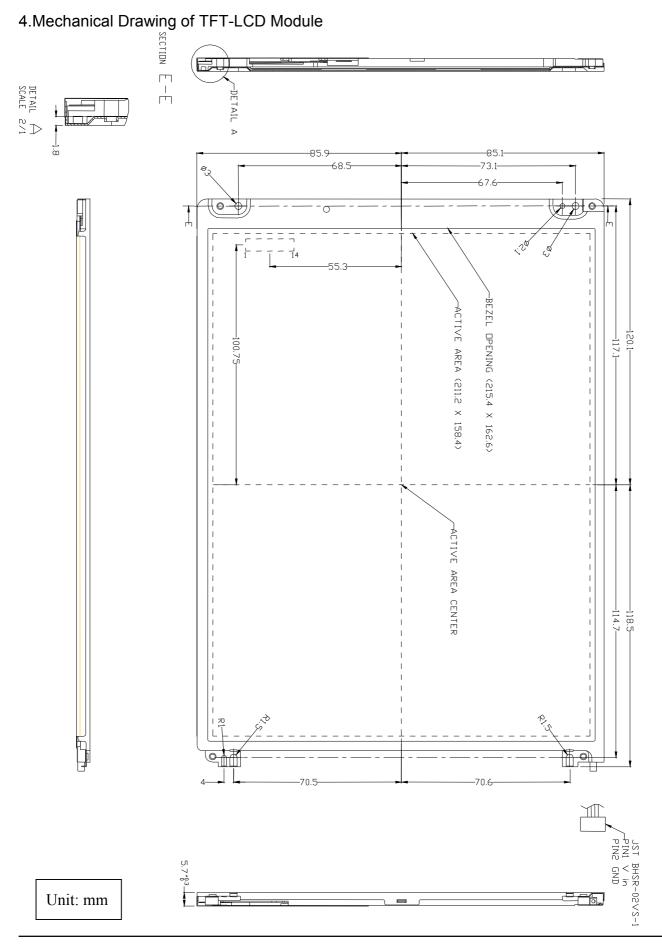

2. Features

- . Amorphous silicon TFT LCD panel with back-light unit
- . Pixel in stripe configuration
- . Slim and compact, designed for O/A application
- . Display Colors : 262,144 colors
- . Optimum Viewing Direction: 6 o'clock
- . 3.3V LVDS interface standard: DS90CF364 as receiver
- . +3.3V DC supply voltage for TFT LCD panel driving
- . Backlight driving DC/AC inverter not included in this module
- .Long Life Lamp

3. Mechanical Specifications

Parameter	Specifications	Unit
Screen Size	26.4(diagonal)	cm
	10.4 (diagonal)	inch
Display Format	800×(R, G, B)×600	dot
Display Colors	262,144	
Active Area	211.2(H)×158.4 (V)	mm
Pixel Pitch	0.264 (H)×0.264 (V)	mm
Pixel Configuration	Stripe	
Outline Dimension	238.6 (w)×171.0(H)×6.0(typ.) (D)	mm
Weight	310(typ.),320(max.)	g
Back-light	Single CCFL, side-light type	
Surface treatment	Anti-glare and hard-coating	
Display mode	Normally white

Note 7-2 : Please refers to DS90CF364 specification by National Semiconductor Corporation. This LCD module conforms to LVDS standard.

Note 7-3: The back-light driving waveform should be as closed to sine-wave as possible. In order to satisfy the quality of B/L, no matter use what kind of inverter, the output lamp—current must between Min. and Max. to avoid the abnormal display image caused by B/L.

Note 7-4 : The kick-off times \geq 1sec.

Note 75 : Not including the efficiency of backlight DC/AC inverter

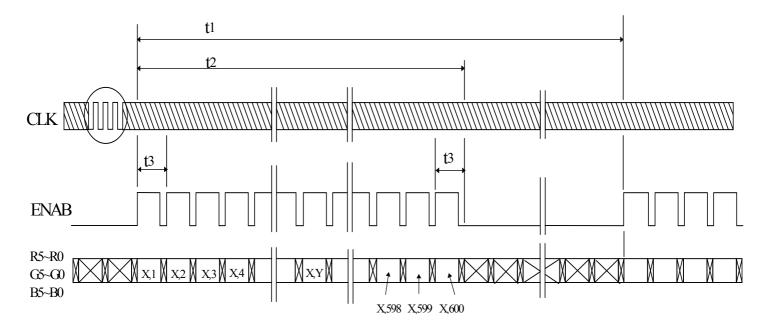

Note 76: Lamp current is measured with current meter for high frequency as shown below

7-4) Pixel Arrangement

The LCD module pixel arrangement is the stripe.

8.)Power On Sequence

- 1. The supply voltage for input signals should be same as $V_{\text{CC.}}$
- 2. When the power is off , please keep whole signals (Hsync, Vsync, CLK, Data) low level or high impedance

All the optical measurement shall be executed 30 minutes after backlight being turn-on. The optical characteristics shall be measured in dark room (ambient illumination on panel surface less than 1 Lux). The measuring configuration shows as following figure.

Optical characteristics measuring configuration

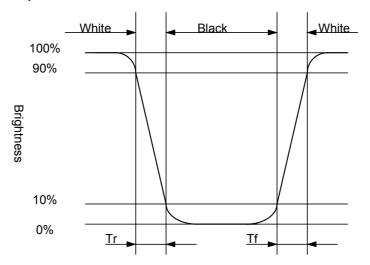

Note 9-1: The definitions of viewing angles are as follows.

Note 9-2 : The definition of contrast ratio $CR = \frac{Luminance at gray level 63}{Luminance at gray level 0}$

Note 93 : Topcon BM-5A luminance meter 1° field of view is used in the testing (after 30 minutes' operation). The typical luminance value is measured at lamp current 5.0 mA.

Note 9-4: Definition of Response Time T_r and T_f:

Note 9-5: The uniformity of LCD is defined as

U = The Minimum Brightness of the 9 testing Points

The Maximum Brightness of the 9 testing Points

Luminance meter: BM-5A or BM-7 fast(TOPCON)

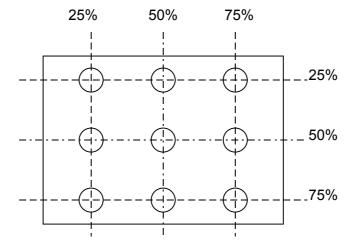

Measurement distance: 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction: Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

Note 9-6: Cross Talk (CTK) =
$$\frac{|YA-YB|}{YA} \times 100\%$$

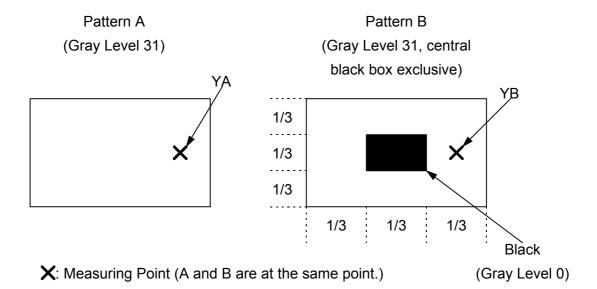

YA: Brightness of Pattern A YB: Brightness of Pattern B

Luminance meter: BM 5A (TOPCON)

Measurement distance: 500 mm +/- 50 mm

Ambient illumination: < 1 Lux

Measuring direction: Perpendicular to the surface of module

10. Handling Cautions

10-1) Mounting of module

- 1. Please power off the module when you connect the input/output connector.
- b) Please connect the ground pattern of the inverter circuit surely. If the connection is not perfect, some following problems may happen possibly.
 - 1. The noise from the backlight unit will increase.
 - 2. The output from inverter circuit will be unstable.
 - 3.In some cases a part of module will heat.
- c) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- d) Protective film (Laminator) is applied on surface to protect it against scratches and dirts. It is recommended to peel off the laminator before use and taking care of static electricity.

10-2) Precautions in mounting

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

10-3) Adjusting module

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

10-4) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.
