

MN63112S

2K-Bit EEPROM

■ Overview

The MN63112S is a 2K-bit EEPROM supporting serial I/O and operating on a single power supply with a voltage between 1.8 and 5.5 V. It provides the following pins for easy interfacing to microprocessors or microcontrollers: chip select (CS), serial clock (SK), data input (DI), and data output (DO). It includes a built-in timer for use in automatically erasing and writing data during data update operations.

The ORG pin provides a choice of two memory organizations: 256×8 bits when ORG is connected to ground and 128×16 bits when ORG is connected to V_{CC} . An internal pull-up resistor makes the latter the default configuration.

Conversion of peripheral circuits to CMOS realizes great reductions in power consumption. Use of floating gate memory cells and a built-in error correction circuit ensures reliable operation for 10^5 write cycles.

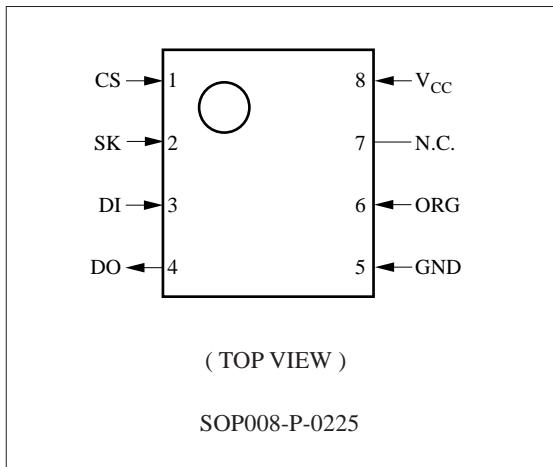

■ Features

- Choice of memory organizations: 256×8 bits and 128×16 bits
- Floating gate memory cells
- Function blocking erroneous writes
- Low power consumption
 - Reads: max. 6.6 mW for $V_{CC} = 3.3$ V
 - Standby: max. 66 μ W for $V_{CC} = 3.3$ V
- Built-in self-timer for use in automatically erasing and writing
- Built-in error correction circuit that guarantees 10^5 write cycles
- 10-year data preservation period

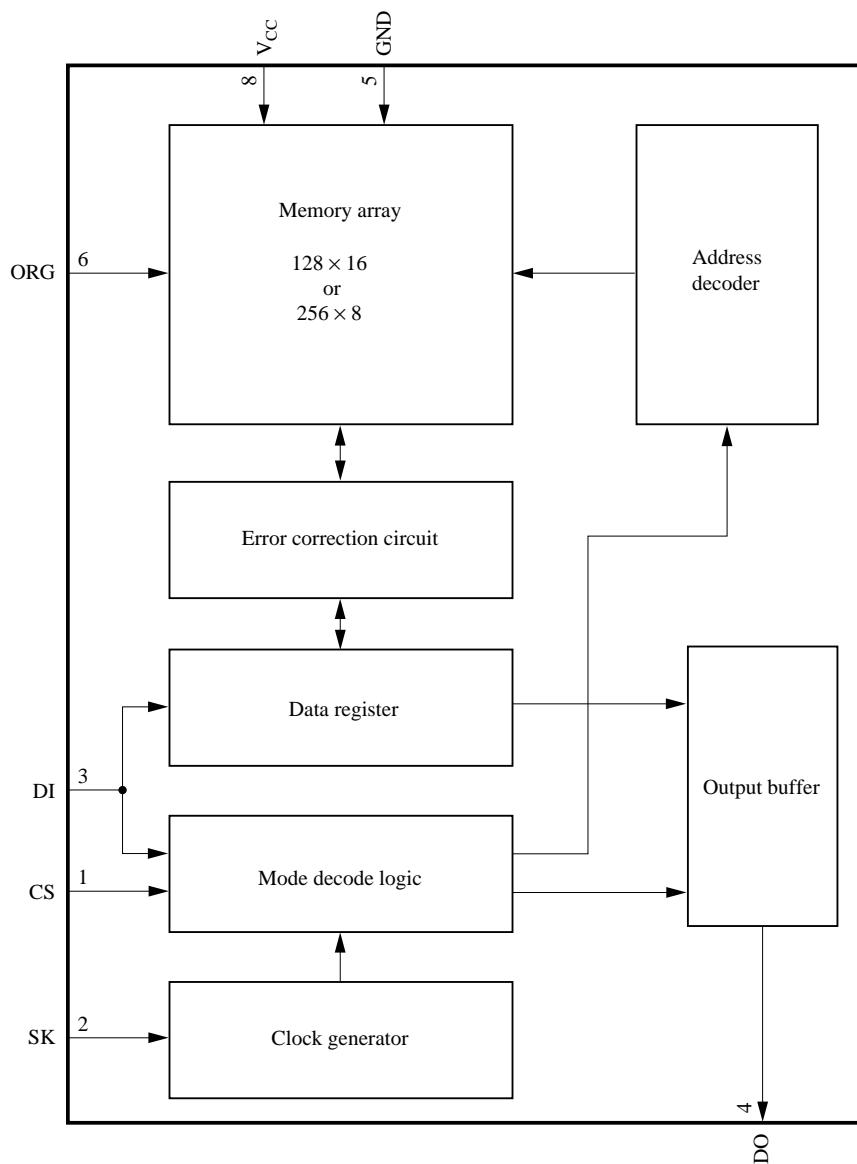

■ Applications

- Keyless entry systems, cordless telephones, storage for recognition and adjustment data for terminals, etc.

■ Pin Descriptions

Pin No.	Symbol	Pin Name
1	CS	Chip select
2	SK	Serial clock
3	DI	Data input
4	DO	Data output
5	GND	Ground
6	ORG	Memory configuration selection
7	N.C.	No connection
8	V _{CC}	Power supply voltage

■ Electrical Characteristics

V_{CC}=1.8V to 5.5V, Ta=-10°C to +70°C
