### DESCRIPTION

The AQY414S is a single pole single throw (SPST), normally close (NC), Mos Relay. The relay can control AC or DC loads currents up to 130 mA, with a supply voltage up to 400 V. The device is packaged in a 4 pin SO package. This package offers an insulation dielectric withstand of 1500 VAC<sub>RMS</sub>.

The coupler consists of a AlGaAs LED that is optically coupled to a dielectrically isolated photodiode array which drives two series connected high voltage MOS transistors. The typical ON-Resistance is 40 $\Omega$  at 25 mA and is linear up to 50mA. The incremental resistance drops to less than 40 $\Omega$  beyond 50 mA while reducing internal power dissipation at high load currents.
