FUNCTIONAL DESCRIPTION

Decimal point system

Complete floating decimal point system. 8 digits leading zero suppression. Zero shift.

IZ1228/IZ1228M

Symbols : - : negative number display
E : error display
, : punctuation comma
M : non-zero memory indicator
C1, C2 : currency exchange operations indicator

Error detections

- **System errors occur when:**

- 1) The division by zero.
- 2) The extraction of square root of a negative number.

- **Rough estimate calculation error occur when**

The integral part of the result of any standard functions, percentage, square, reciprocal, or power calculations exceed 8 digits.

Error indication

- **System error**

“0” is indicated in the 1-digit position and “E” in the sign-digit position.

- **Rough estimate calculation error**

The high-order 8-digit calculation result is indicated together with “E”.

The decimal point is indicated in the position corresponding to a calculation result of time 10^{-8} , and no zero shift is performed

Error release

- **System error**

A system error can be release by the ON/C key.

- **Rough estimate calculation error**

A rough estimate calculation error can be released by the ON/C, CE key.

Number entry

Numerical can be entered up to 8 digits. Numerical entries equal to 9 digits or more are ignored.

Memory protection

In any error detection, the special memory content is retained when auto power off.

Key bounce protection

Front edge

Down to 1 word and up to about 3 words.

Trailing edge

9 words

1 word is 3.3ms when display frequency is $f_d = 100\text{Hz}$.

Auto power OFF

Power automatically turns off after 9 - 11 minutes pass from the last key pressure. The special memory content is saving when power auto off.
