

Electronics

Digital Attenuator, 5-Bit, 15.5 dB 500 - 2500 MHz

Features

- 5 Bits, 0.5 dB Steps
- Excellent Accuracy
- Single Positive Control (+3 V to +5 V)
- Lead-Free MSOP-10 Package
- 100% Matte Tin Plating over Copper
- Halogen-Free "Green" Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description

M/A-COM's MAATSS0022 is a 0.5 dB step GaAs MMIC digital attenuator with 15.5 dB attenuation range in a lead-free MSOP-10 package. It requires external DC blocking capacitors on the RF ports, positive supply voltage and five individual bit control voltages.

The MAATSS0022 is particularly suited where high attenuation accuracy, low insertion loss and low intermodulation products are required. Typical applications include base stations, wireless data, and wireless local loop gain level control circuits.

The MAATSS0022 is fabricated using M/A-COM's GaAs 1.0 micron process. The process features full chip passivation for increased performance and reliability.

Ordering Information¹

Part Number	Package	
MAATSS0022	Bulk Packaging	
MAATSS0022TR-3000	3000 piece reel	
MAATSS0022SMB	Sample Test Board	

1. Reference Application Note M513 for reel size information.

RoHS Compliant

MAATSS0022 V2

Recommended Configuration

Pin Configuration

Pin No.	Function	Pin No.	Function
1	VC1	6	RF Port 2
2	VC2	7	Ground
3	VC3	8	Ground
4	VC4	9	Ground
5	VC5	10	RF Port 1

Absolute Maximum Ratings ^{2,3}

Parameter	Absolute Maximum		
Input Power	+34 dBm		
Voltage	+7 V		
Operating Temperature	-40°C to +85°C		
Storage Temperature	-65°C to +125°C		

2. Exceeding any one or combination of these limits may cause permanent damage to this device.

 M/A-COM does not recommend sustained operation near these survivability limits.

* Restrictions on Hazardous Substances, European Union Directive 2002/95/EC.

Operating Instructions

The MAATSS0022 is designed to operate with 5 V logic levels. The difference between +3 V and +5 V operation is minimal for small signal performance. IIP3, however, is a strong function of voltage. +3 V is the minimum voltage at which the product will reliably operate.

The MAATSS0022 requires a parallel interface that allows the user to enter a 5 bit digital word. Each state increments the attenuation by 0.5 dB giving a total range of 15.5 dB.

The MAATSS0022 is not internally DC blocked. This means that the device requires DC blocking capacitors on the RF1 and RF2 ports. M/A-COM recommends 0.1 uF to allow for the entire frequency range to be utilized. Higher frequency applications can use smaller value capacitors as DC blocks.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

4

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
