Description

M/A-COM's MAMXSS0010 is a passive mixer that achieves the performance of a double balanced diode mixer in a lead-free surface mount plastic SOIC-8 package. The MAMXSS0010 is ideally suited for use where high level RF signals and very wide dynamic range are required.

Typical applications include frequency up/down conversion, modulation, demodulation in systems such as base station receivers and transmitters for DCS1800, PCS and PHS applications.

The MAMXSS0010 uses FETs as mixing elements to achieve very wide dynamic range in a low cost plastic package. The mixer operates with LO drive levels of +11 dBm to +23 dBm. No DC bias is required.

M/A-COM's MAMXSS0010 is fabricated using a mature 1-micron GaAs process. The process features full IC passivation for increased performance and reliability.

The spurious table shows the spurious signals resulting from the mixing of the RF and LO input signals, assuming down conversion. Mixing products are indicated by the number of dB below the conversion loss. The lower frequency mixing term is shown for two different RF input levels. The top number is for an RF input power of -5 dBm, the lower number is for -15 dBm.

 $\label{eq:response} \begin{array}{l} |mF_{RF} - nF_{LO} \mid, RF = -5 \ dBm \\ |mF_{RF} - nF_{LO} \mid, RF = -15 \ dBm \\ RF \ Frequency = 1850 \ MHz \\ LO \ Frequency = 1710 \ MHz \end{array}$
