

Electronics

Termination-Insensitive Mixer, 0.5 - 9 GHz

Features

- Intermodulation Ratio Insensitive to IF Ports Mismatches
- Conversion Loss: 6.5 dB Typical Midband
- Maximum Input Power: 350 mW max. @ 25°C, Derated 3.5 mW/°C
- Low Power: +24 dBm Max.
- MIL-STD-883 Screening Available

Description

The unique design of the termination insensitive mixer (TIM) enables it to apply high reverse voltage to diodes during their "off" phase, in the LO cycle. This allows for higher power level performance with minimum distortion. In addition the TIM has internal loads that provide a good match and also absorb mixer generated LO frequency terms. Combined, these features give the mixer its insensitivity to external mismatches, plus superior VSWR.

1. All specifications apply when operated at +13 dBm available LO power with 50 ohm source and load impedance.

2. For IF frequencies of 10 - 500 MHz and an RF of –10 dBm or lower.

3. Independent of sum frequency match.

This product contains elements protected by United States Patent Number 4,224,572
