INFRARED RECEIVER MODULE

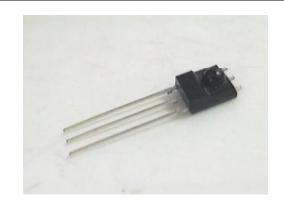

Description

The MIM-93M1AKL is 37.9 $\rm KH_Z$ miniaturized infrared receivers for remote control and other appplications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single leadframe.

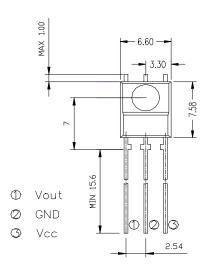

The epoxy package contains a special IR filter.

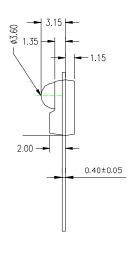

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

Features

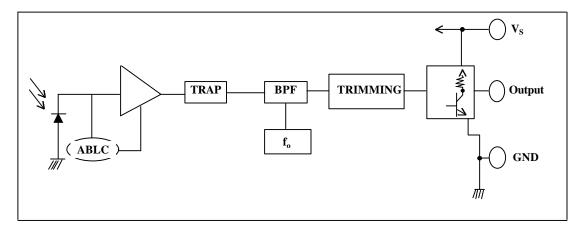

- Photo detector and preamplifier in one package
- Internal filter for PCM frequency
- High immunity against ambient light
- 5-Volt supply voltage; low power consumption
- TTL and CMOS compatibility

unit: mm

CAUTION (When use and storage of this device)

- 1. Store and use where there is no force causing transformation or change in quality .
- 2.Store and use where there is no corrosive gas or sea(salt) breeze.
- 3.Store and use where there is no extreme humidity.
- 4. Solder the lead-pin within the condition of ratings. After soldering do not add extra force .
- 5.Do not wash this device . Wipe the stains of diode side with a soft cloth. You can use the solvent , ethylalcohol or methylalcohol or isupropylene only .
- 6.To prevent static electricity damage to the Pre-AMP make sure that the human body , the soldering iron is connected to ground before using .
- 7. Put decoupling device between Vcc and GND for reduse the noise from power supply line .
- 8. The performance of remote-control system depends on environments condition and ability of periferal parts. Customer should evaluate the performance as total system in those conditions after system up with components such as commander, micon and this receiver module.
