NTE5629 TRIAC – 400V_{RM}, 4Amp

Description:

The NTE5629 TRIAC is a bi-directional triode thyristor in a TO202 type case. This device may be switched from off-state to conduction for either polarity of applied voltage with positive or negative gate-trigger current. The NTE5629 can be driven directly with IC and MOS devices and is designed for control applications in lighting, heating, cooling, and static switching relays.
