

R768-Type OC-768/STM-256 Lightweight Receiver

The R768 Receiver is manufactured in a 16-pin, pigtailed surface-mount metal package with a single-ended V-connector.

Features

- High data rate capability, 40 Gbits/s
- PIN photodetector
- Fully operational through the L-band (1.6 μm) wavelength range
- Single-mode fiber pigtail with FC/PC optical connector
- Operating case temperature range: 0 $^{\circ}\text{C}$ to 65 $^{\circ}\text{C}$
- Compact, butterfly package

Applications

- Line terminal equipment
- High-speed networks up to 40 Gbits/s
- SONET OC-768 and SDH STM-256 telecommunications applications
- Extended-reach datacom and telecom applications
- Digital video

Description

Receiver Operation

The R768 40 Gbits/s fiber-optic receiver consists of a high-speed photodetector (PIN) and a wide-band linear preamp in a pigtailed surface-mount metal package with a single-ended V-connector. It is designed for use in single-mode, high-speed telecommunication applications at the SONET OC-768 and the ITU-T SDH STM-256 data rate of 42.5 Gbits/s.

The operating case temperature range for the receiver is 0 °C to 65 °C.

The receiver is manufactured in a compact, 16-pin surface-mount package with a single-mode optical fiber pigtail. The fiber pigtail is internally beveled for low return loss and is available with an FC-PC optical connector.

The received data is dc-coupled.

The receiver requires only a 6 V power supply for operation, plus an optional VADJUST from -1.0 V to +1.0 V (see pin descriptions). The photodiode requires a separate bias voltage: for the PIN, a nominal reverse bias of 4 V is required.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operations section of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Min	Max	Unit
Positive Supply Voltage	VCC	5.0	7.0	V
Photodiode Forward Current*	IPD	—	1	mA
Maximum Reverse Bias	VB	—	5	V
