

Product Description

Sirenza Microdevices' SBB-1089 is a high performance InGaP HBT MMIC amplifier utilizing a Darlington configuration with an active bias network. The active bias network provides stable current over temperature and process Beta variations. Designed to run directly from a 5V supply, the SBB-1089 does not require a dropping resistor as compared to typical Darlington amplifiers. The SBB-1089 product is designed for high linearity 5V gain block applications that require small size and minimal external components. It is internally matched to 50 ohms.

The matte tin finish on Sirenza's lead-free package utilizes a post annealing process to mitigate tin whisker formation and is RoHS compliant per EU Directive 2002/95. This package is also manufactured with green molding compounds that contain no antimony trioxide nor halogenated fire retardants.

Preliminary

SBB-1089

SBB-1089Z

50 - 850 MHz, Cascadable

Active Bias InGaP/GaAs HBT MMIC Amplifier

Product Features

- Available in Lead Free, RoHS compliant, & Green packaging
- IP₃ = 43.1 dBm @ 240MHz
- P_{1dB} = 19.6 dBm @ 500MHz
- Single Fixed 5V Supply
- Robust 1000V ESD, Class 1C
- Patented Thermal Design & Patent Pending Bias Circuit
- Low Thermal Resistance
- MSL 1 moisture rating

Applications

- Receiver IF Amplifier
- Cellular, PCS, GSM, UMTS
- Wireless Data, Satellite Terminals

Absolute Maximum Ratings

Parameter	Absolute Limit
Ma. Dvice Current (I _D)	110 mA
Max Device Voltage (V _D)	5.5 V
Max. RF Input Power	+12 dBm
Max. Operating Dissipated Power	0.61 W
Max. Junction Temp. (T _J)	+150°C
Operating Temp. Range (T _L)	-40°C to +85°C
Max. Storage Temp.	+150°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one. Bias Conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_L) / R_{TH, j-l} \quad T_L = T_{LEAD}$$

ESD Class 1C

Appropriate precautions in handling, packaging and testing devices must be observed.

Mounting Instructions

1. Solder the copper pad on the backside of the device package to the ground plane.
2. Use a large ground pad area with many plated through-holes as shown.
3. We recommend 1 or 2 ounce copper. Measurement for this datasheet were made on a 31 mil thick FR-4 board with 1 ounce copper on both sides.

MSL (Moisture Sensitivity Level) Rating: Level 1

Pin #	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible.
3	RF OUT/ BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.
