

SP26LV432

High-Speed, Low-Power Quad RS-422 Differential Line Receiver

- Quad Differential Line Receivers
- Compatible with the EIA standard for RS-422 serial protocol
- High-Z Output Control
- 14ns Typical Receiver Propagation Delays
- 60mV Typical Input Hysteresis
- Single +3.3V Supply Operation
- Common Receiver Enable Control
- 26LV32 industry standard footprint compatible
- -7.0V to +7.0V Common-Mode Input Voltage Range
- Switching Rates Up to 50Mbps
- Ideal for use with SP26LV431 Quad Drivers

Now Available in Lead-Free Packaging

DESCRIPTION

The **SP26LV432** is a quad differential line receiver with three-state outputs designed to meet the specifications of RS-422. The **SP26LV432** features Sipex's BiCMOS process allowing low power operational characteristics of CMOS technology while meeting all of the demands of the RS-422 serial protocol at 50Mbps under load. The RS-422 protocol allows up to ten receivers to be connected to a multipoint bus transmission line. The **SP26LV432** features a receiver enable control common to all four receivers and a high-Z output with 6mA source and sink capability. Since the cabling can be as long as 4,000 feet, the RS-422 receivers of the **SP26LV432** are equipped with a wide (-7.0V to +7.0V) common-mode input voltage range to accommodate ground potential differences.

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

V _{CC} (Supply Voltage)	+7.0V
V _{CM} (Common Mode Range)	±14V
V _{DIFF} (Differential Input Voltage)	±14V
V _{IN} (Enable Input Voltage)	V _{CC} + 1.5V
T _{STG} (Storage Temperature Range)	-65°C to +150°C
Maximum Current Per Output	±25mA
Storage Temperature	-65°C to +150°C
Power Dissipation Per Package	
16-pin PDIP (derate 14.3mW/°C above +70°C)	1150mW
16-pin NSOIC (derate 8.95mW/°C above +70°C)	725mW

CAUTION:

ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

ELECTRICAL CHARACTERISTICS

Unless otherwise noted, the following specifications apply for V_{CC} = +3.0V to +3.6V with T_{AMB} = 25°C and all MIN and MAX limits apply across the recommended operating temperature range.

DC PARAMETERS	MIN.	TYP.	MAX.	UNITS	CONDITIONS

The SP26LV432 is a low-power quad differential line receiver designed for digital data transmission meeting specifications of the EIA standard RS-422 protocol. The SP26LV432 features Sipex's BiCMOS process allowing low power operational characteristics of CMOS technology while meeting all of the demands of the RS-422 serial protocol to at least 50Mbps under load in harsh environments.

The RS-422 standard is ideal for multi-drop applications and for long-distance communication. The RS-422 protocol allows up to ten receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, the RS-422 receivers have an input sensitivity of 200mV over the wide (-7.0V to +7.0V) common mode range to accommodate ground potential differences. Internal pull-up and pull-down resistors prevent output oscillation on unused channels. Because the RS-422 is a differential interface, data is virtually immune to noise in the transmission line.

The SP26LV432 accepts RS-422 levels and translates these into TTL or CMOS input levels. The SP26LV432 features active HIGH and active LOW receiver enable controls common to all four receiver channels. A logic HIGH on the ENABLE pin (pin 4) or a logic LOW on the ENABLE pin (pin 12) will enable the differential receiver outputs. A logic LOW on the ENABLE pin (pin 4) and a logic HIGH on the ENABLE pin (pin 12) will force the receiver outputs into high impedance (high-Z). Refer to the truth table in Figure 20.

The RS-422 line receivers feature high source and sink current capability. All receivers are internally protected against short circuits on their inputs. The receivers feature tri-state outputs with 6mA source and sink capability. The typical receiver propagation delay is 14ns (35ns max).

To minimize reflections, the multipoint bus transmission line should be terminated at both ends in its characteristic impedance, and stub lengths off the main line should be kept as short as possible.
