

Measurement condition

Ambient temperature: 23 °C
 Input power level: 0 dBm
 Terminating impedances: input: 50 Ω
 output: 50 Ω

Characteristics**Remark:**

The maximum of the pass band attenuation a_{\max} is defined as the insertion loss a_e . The nominal frequency f_N is fixed at 465,0 MHz without tolerance. The given values for the absolute attenuation a_e have to be reached at the frequencies given below even if the centre frequency f_C is shifted due to the temperature coefficient of frequency TC_f in the operating temperature range and due to a production tolerance for the centre frequency f_C .
