### General Description

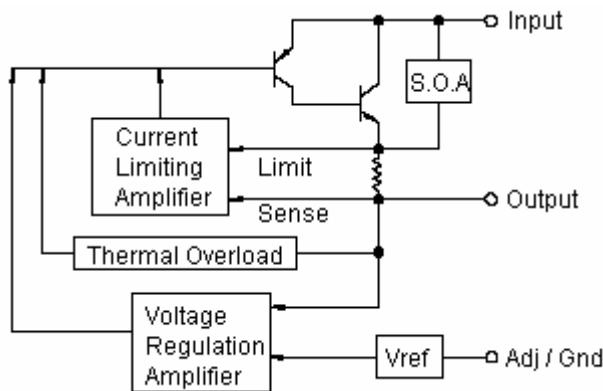

The TS1117B Series are high performance positive voltage regulators designed for use in applications requiring low dropout performance at full rated current. Additionally, the TS1117B Series provides excellent regulation over variations due to changes in line, load and temperature. Outstanding features include low dropout performance at rated current, fast transient response, internal current limiting and thermal shutdown protection of the output device. The TS1117B Series are three terminal regulators with fixed and adjustable voltage options available in popular packages.

This series is offered in 3-pin TO-252 SOT-223 and 8-pin SOP package.

## Thermal Performance

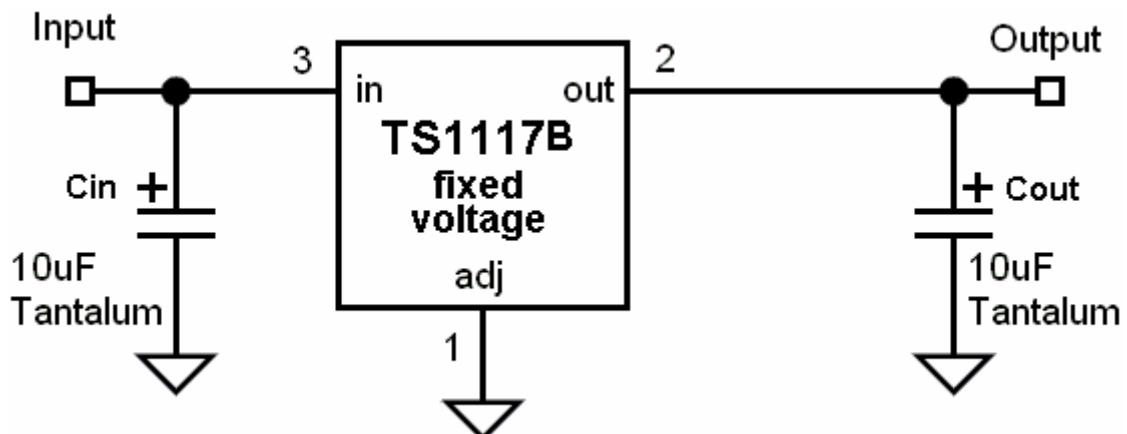

Condition	Package type	Typ	Unit
Thermal Resistance Junction to Ambient	TO-252	90	°C/W
	SOP-8	160	
	SOT-223	165	

Note 1: See thermal regulation specification for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/16" from the package.

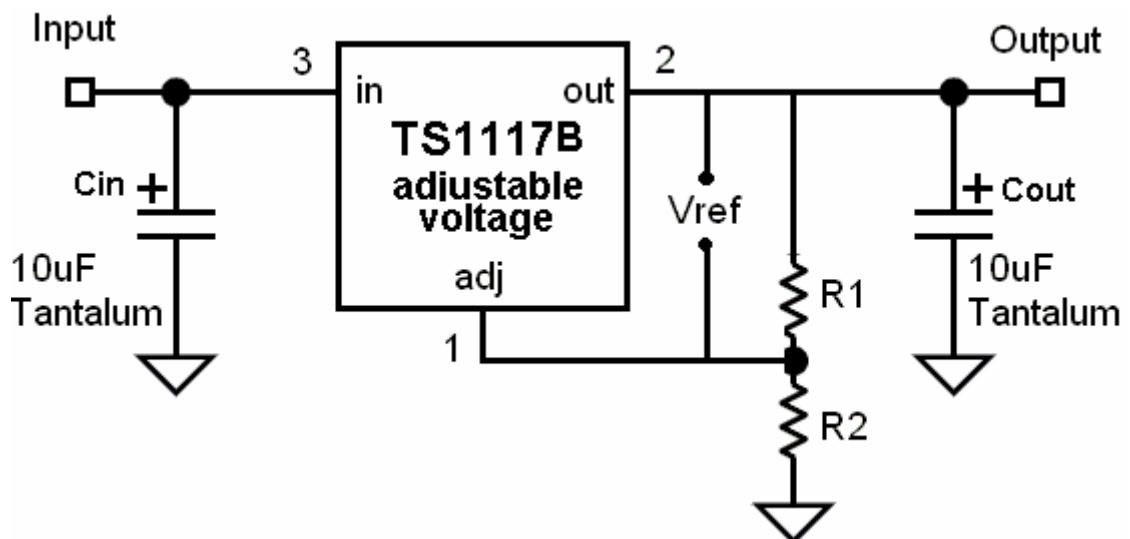

Note 2: Line and load regulation are guaranteed up to the maximum power dissipation of 15W. Power dissipation is determined by the input / output voltage difference and the output current. Guaranteed maximum power dissipation will not be available over the full input / output voltage range.

Note 3: Quiescent current is defined as the minimum output current required to maintain the regulation.

## Typical Application Circuit

Fixed output voltage version

$$V_{out} = V_{ref} \cdot (1 + R_2 / R_1)$$

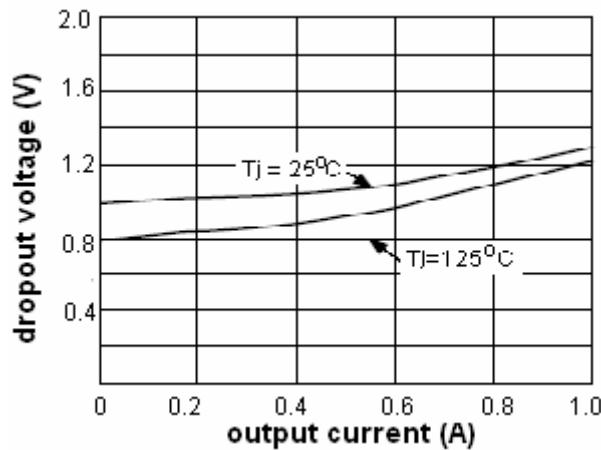

\* Cin is requested if regulator is located  
Far from power supply filter

\*\* Design Cout as close to Vout pin as possible

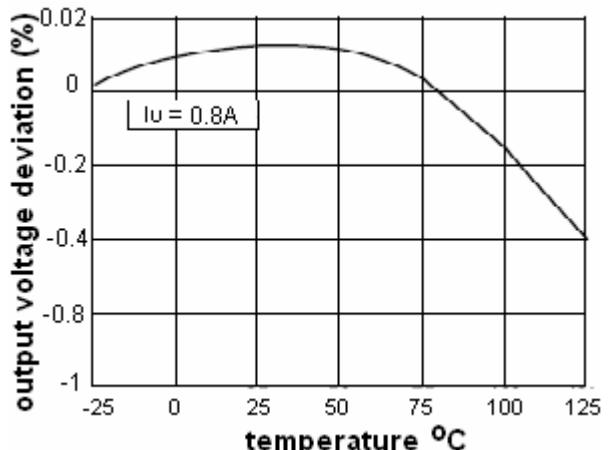

Adjustable output voltage version
