

XB1086 Series

TOREX

ETR0325-004

1.5A Positive Voltage Regulator

GENERAL DESCRIPTION

The XB1086 is a series of low dropout positive voltage regulators with a high output current capability of 1.5A.

Stable output can be maintained by using 10 μ F (C_{IN}) and 22 μ F (C_L) of tantalum capacitors.

The XB1086P series is available in the fixed voltage types of 1.5V, 1.8V, 2.5V, 3.3V, and 5.0V. The XB1086K is also available as a voltage adjustable type which can set the output voltage with only two external resistors. With an over current and thermal protection circuit built-in, the IC is disabled for protection when an output current reaches limit current or junction temperature increases up to limit temperature.

The XB1086 series is available in TO-252 package.
