

FAN3800 — Mono / Stereo Audio Amplifier with Microphone Pre-Amplifier and EMU Interface

Features

- Regulated positive supply
- Negative supply generator allows ground-centered output swing
- Dual speaker drivers with mono/stereo switch capability
- Capable of driving 16mW_{RMS} per channel
- Complete external microphone interface
- Enhanced mini-USB bus detection and interface circuitry
- Manual and remote send-end switch interface
- Pop and click suppression
- Single 2.7V to 4.5V operation
- 2kV ESD (HBM) protection
- MLP 24-pin package

Applications

- One-piece stereo/mono headset with microphone
- EMU to 3.5mm stereo headphone adapter
- EMU to 2.5 or 3.5 adapter for stereo headset with microphone

Description

The FAN3800 is a low-cost solution that integrates the many discrete parts currently used in stereo headset applications. It provides mono / stereo speaker drivers and a complete microphone interface. Additionally, the FAN3800 allows headset detection and identification through a 5-pin, enhanced mini-USB (EMU) bus. Manual and remote send-end switching is supported.

The FAN3800 speaker drivers are designed to operate with a ground-centered output signal. This allows removal of large and expensive DC blocking capacitors. In addition, it allows interfacing with externally powered speakers. The speaker drivers are capable of driving up to 16mW_{RMS} per channel.

FAN3800 delivers a complete solution for interfacing an external microphone. The microphone interface provides a regulated, high PSRR supply, differential input sense to single-ended output driver amplifiers, and output muting. Gain is fixed at 36dB and can be attenuated externally with a resistor divider network.

Send-end switching automatically routes the microphone output to the D+ output. When activated, the speakers switch from stereo to mono mode, both driven by the D- input. Pop and click noise is minimized during switching. Send-end information can be generated manually through an external switch or through the EMU bus interface.

Pin Definitions

Pin #	Name	Type	Description
1	ID	Input	Identification pin
2	MUTE	Input	Microphone mute control input
3	BYPASS	Output	External 100nF capacitor used for pop/click suppression
4	MIC+	Input	High-side differential MIC input
5	MIC-	Input	Low-side differential MIC input
6	MICSUP	Output	Microphone supply pin
7	MICOUT	Output	Microphone amplifier output tap for setting gain and shifting the DC bias level
8	MICSW	Input	Output of microphone amplifier AC coupled to the D+ switch
9	GND	Input	IC ground
10	D-	Input	DC biased EMU bus input for send-end enable
11	SPKLIN	Input	Left audio channel input
12	SPKRIN	Input	Right audio channel input
13	D+	Input	DC biased EMU bus input for identification
		Output	Driven by MICOUT in mono mode
14	SPKRROUT	Output	Right speaker driver output
15	VS	Input	Supply input from host device (3.3V typical)
16	SPKLOUT	Output	Left speaker driver output
17	V-	Input	Filtered negative supply driven by CPOUT
18	CPOUT	Output	Charge pump unfiltered output
19	CP2	I/O	Charge pump external cap pin
20	CP1	I/O	Charge pump external cap pin
21	VS	Input	Supply input from host device (3.3V typical)
22	GND	Input	IC ground
23	V+	Output	Positive power supply output for decoupling capacitor
24	SW1	Input	Send-end switch input

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
V_S	Supply Voltage	-0.3	+6.0	V
$V_{I/O}$	Analog and Digital I/O	GND-0.3	$V_{CC}+0.3$	V
