

## A.HE83R142 Introduction

HE83R142 is a member of 8-bit Micro-controller series developed by King Billion Electronics Ltd.

Users can chose any one of combination among 【1024 dots LCD Driver + 16 Bit I/O Port】... 【896 dots LCD Driver + 24 Bit I/O Port】 etc. The built-in OP comparator can be used with (light、voice、temperature、humility) sensor and used as battery low detection. The 7-bit current-type D/A converter and PWM device provide the complete speech output mechanism. The 256K ROM Size can be used in the storage of speech、graphic、text etc.. . It can be applicable to the medium systems such as Small-Scale Dictionary, Data Bank, Educational Toy, Digital Voice Recording System etc. It also can be connected to SRAM or Flash RAM for recording function.

The instruction set of HE83R142 are quite easy to learn and simple to use. Only about thirty instructions with four-type addressing mode are provided. Most of instructions take only 3 oscillator clocks (machine cycles). The processing power is enough to most of battery operation system.

## B.HE83R142 Features

- Operation Voltage : 2.4V – 5.5V
- System Clock : DC ~ 8MHz @ 5.0V  
DC ~ 4MHz @ 2.4V
- Internal ROM : 256K Bytes
- Internal RAM : 4K Bytes
- Dual Clock System : Normal (Fast) clock : 32.768K ~ 8MHz  
Slow clock : 32.768KHz
- Operation Mode : DUAL、FAST、SLOW、IDLE、SLEEP Mode.
- With WDT (WATCH DOG TIMER) to prevent deadlock condition.
- 16~24 bit Bi-directional I/O port. Mask Option can select PUSH-PULL or OPEN DRAIN output mode for each I/O pin. 8 of them are shared with LCD segment pins.
- One built-in OP comparator.
- 1024~896 dots LCD driver (B TYPE selectable). (No LCD contrast control function)
- Build in LCD Voltage Regulator.
- One 7-bit current-type DAC output.
- PWM device.
- Two external interrupts and three internal timer interrupts.
- Two 16-bit timers and one Time-Base timer.
- Instruction set : 32 instructions, 4 addressing mode. 12-bit DATA POINTER for RAM and 18-bit TABLE POINTER for ROM.

## C. Internal Block

Please always take in mind that ICE is different from IC. ICE is the whole set of HE80000 series IC, but each IC is a subset of ICE. Never use any hardware resource that real IC didn't have, especially RAM and register. KBIDS and compiler cannot prevent user to use some hardware resource that didn't exist. Please check the following table and refer the abbreviation in HE80000 user's manual.

## D. Pin Description

Pin#	Pin name	I/O	Function	Description
111, 110	<b>FXI, FXO</b>	B, O	External fast clock pin. Connecting to crystal or RC to generate 32.768 kHz ~ 8MHz frequency.	Mask option setting : MO_FCK/SCKN = 00 : Slow Clock only 01 : Illegal 10 : Dual Clock 11 : Fast Clock only MO_FOSCE = 0 : Internal fast osc. = 1 : External fast osc. MO_FXTAL = 0 : RC osc. for fast clock = 1 : X'tal osc. for fast clock MO_SXTAL = 0 : RC for 32768 Hz clock = 1 : X'tal for 32768 Hz clock Use OP1 and OP2 to switch among different operation mode (NORMAL, SLOW, IDEL and SLEEP). In Dual Clock mode, the main system clock is still the Fast Clock. The 32768 Hz clock is for LCD and Timer 1 only.
114, 113	<b>SXI, SXO</b>	I, O	External slow clock pin. Connecting with 32768 Hz crystal or resistor as slow clock and providing clock source for LCD display, TIMER1, Time-Base and other internal blocks.	
109	<b>RSTP_N</b>	I	System Reset.	Level trigger, active low. Except for using this pin, using mask option (MO_PORE=1) could enable IC build-in Power-on reset circuit. Besides, MO_WDTE can set Watch Dog Timer : MO_WDTE=0 : Disable Watch Dog Timer =1 : Enable Watch Dog Timer
112	<b>TSTP_P</b>	I	Test Pin	<b>Please bond this pin and add a test point on PCB for debugging. But for improving ESD, please connect this pin with zero Ohm resistor to GND.</b>
124..127, 1..4	<b>PRTC[7:0]</b>	B	8-pin bi-directional I/O port.	Mask options : MO_CPP[7..0]=1 ~ Push-pull. =0 ~ Open-drain. Output must be "1" before reading whenever use them as input (No tri-state structure).
116.. 123	<b>PRTD[7:0]</b>	B	8-pin bi-directional I/O port. PRTD[7..2] as wake-up pin. PRTD[7..6] as external interrupt pin.	Mask options : MO_DPP[7..0]=1 ~ Push-pull. =0 ~ Open-drain. Output must be "1" before reading whenever use them as

Note: \*1: Drive Current Spec. for Push-Pull I/O port only

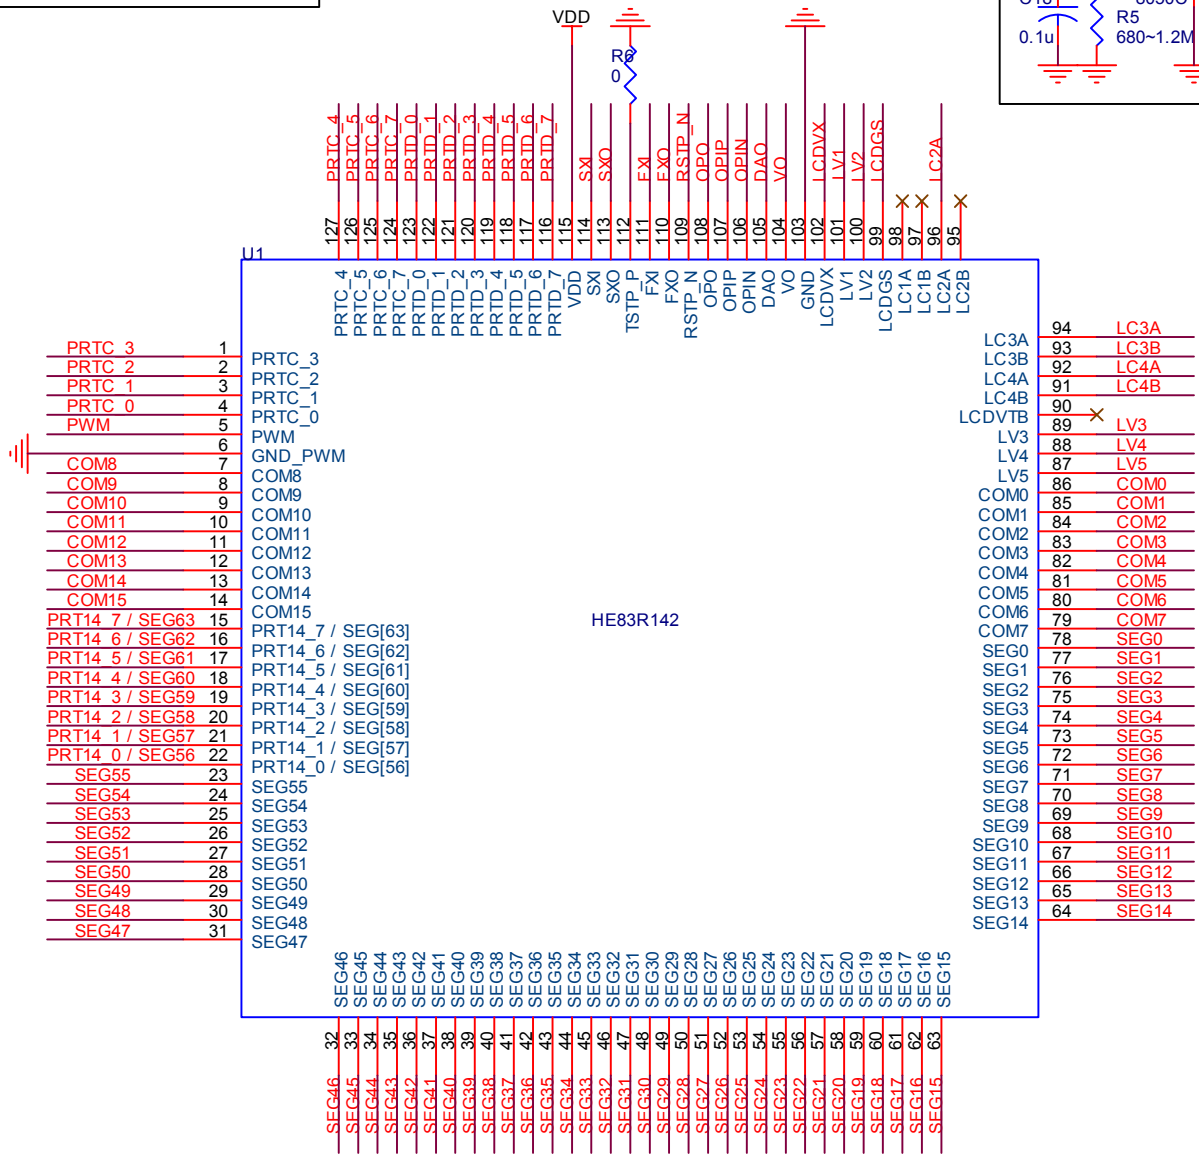

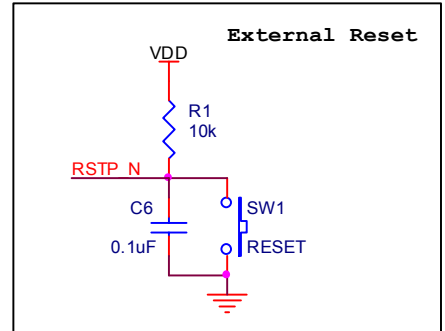

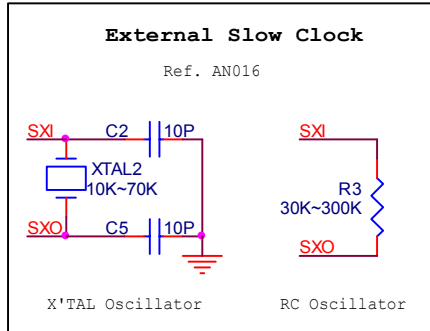

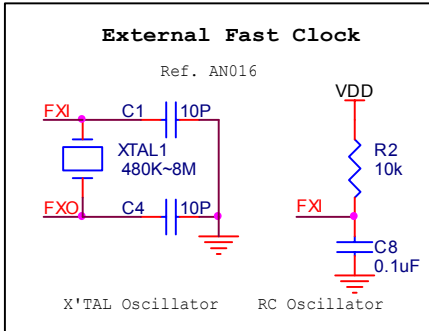

Sink Current Spec. for both Push-Pull and Open-Drain I/O port.

\*2: This Spec. base on one driver only. There are five build-in driver, so user just multiply the number of driver he used to one driver current to get the total amount of current.

# I. Application Circuit

### 4G LCD Charge Pump Circuit, 1/5 Bias, 1/16 Duty Configuration

**LV5 Voltage Must < 9.0 V , Else IC will be burned down**

Let LC1A, LC1B, LC2B, LCDVTB pin floating

**NOTE :** Use Resistor adjust LV2 voltage must let  $VDD \geq LV2 + 0.4V$  , Else LCD charge pump will work un-well . And the  $LV5 \text{ voltage} = LV2 * 5 / 2$

For more detail information, please refer the new version of AN025 for this Type-IV LCD Driver.

## J. Important Note

1. For accessing any address large than 64KB, users must update TPP first, TPH then TPL. Only by this order, the pre-charge circuit of ROM will work correctly. 5us waiting is necessary before LDV instruction is executed since Data ROM is a low speed ROM. Users can not emulate this accessing process in ICE. So 5us delay should be added by firmware.
2. LCD driving circuit must be turn off before IC goes into sleep mode.
3. Please bonds the TSTP\_P, RSTP\_N and PRTD[7:0] with test point on PCB (can be soldered and probed) as you can, then KB can do some IC testing job on PCB. Please connect TSTP\_P pin with zero ohm resistor(or copper wire which can be cut on PCB) normally for good ESD result. KB can pull low the TSTP\_P pin by remove the zero ohm resistor . The following figure is an example (Testing point with through hole).

4. LV5 must small than 9.0 Volt. Otherwise IC may breakdown.
