

## FEATURES

- Step-up switching regulator with 3 A switch current limit**
  - 8 V to 16.5 V input voltage range
  - Adjustable output voltage up to 20 V
  - 1.2 A series switch for power sequencing
  - Overvoltage protection (OVP)
- Step-down switching regulator with 3 A switch current limit**
  - 8 V to 16.5 V input voltage range
  - Adjustable output voltage down to 2.5 V
- Gate pulse modulator circuitry**
  - Independently adjustable delay and falling slope
- Positive charge-pump regulator for VGH**
- Negative charge-pump regulator for VGL**
- Two VCOM amplifiers**
- General**
  - Power supply sequencing
  - Thermal fault protection
  - 650 kHz or 1.2 MHz PWM frequency
  - Soft start
  - Undervoltage lockout (UVLO)
  - 48-lead RoHS compliant LFCSP

## APPLICATIONS

TFT LCD panels for TVs and monitors

## GENERAL DESCRIPTION

The ADD8733 is a 4-channel regulator with two VCOM amplifiers and gate pulse modulation (GPM) that provides all the necessary voltages for thin film transistor (TFT) liquid crystal displays (LCD). Included is a step-up regulator, a step-down regulator for digital logic, two VCOM amplifiers, two charge-pump regulators for VGH and VGL, and an integrated gate pulse modulator.

## BLOCK DIAGRAM

Figure 1.

05952-001

By offering a complete power integration solution optimized for TFT LCD TVs and monitors, the ADD8733 helps to lower cost, simplify board design, and increase performance over existing solutions.

The ADD8733 is offered in a 48-lead RoHS compliant LFCSP and is specified over the industrial temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
