

### Typical Applications

The HMC285 / HMC285E is ideal for:

- PCS
- W-CDMA
- 2.4 GHz ISM
- MMDS

### Features

- No External Components Required
- LO / RF Isolation: 30 dB
- Input IP3: +21 dBm
- Ultra Small SOT26 Package

### Functional Diagram

### General Description

The HMC285 & HMC285E are ultra miniature single balanced mixers in 6 lead plastic surface mount SOT26 packages. This passive MMIC mixer is constructed of GaAs Schottky diodes and a novel planar transformer balun on the chip. The RF port is balanced via the MMIC balun while the LO port is connected directly to the diodes. The consistent MMIC performance will improve system operation without the need for external components. The SOT26 package is the smallest footprint available for a complete single-balanced mixer, 0.118" x 0.118" (3.0mm x 3.0mm).

### Electrical Specifications, $T_A = +25^\circ \text{C}$ , As a Function of IF Frequency

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should be generated with proper RF circuit design techniques. Signal lines should have 50 ohm impedance and the package ground leads should be connected directly to the ground plane similar to that shown above. The evaluation circuit board as shown is available from Hittite upon request.
