

Typical Applications

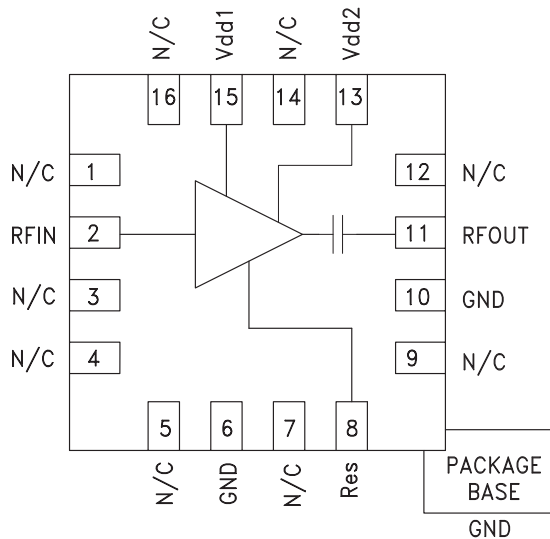

The HMC618LP3(E) is ideal for:

- Cellular/3G and LTE/WiMAX/4G
- BTS & Infrastructure
- Repeaters and Femto Cells
- Public Safety Radios

Features

- Noise Figure: 0.75 dB
- Gain: 19 dB
- OIP3: 36 dBm
- Single Supply: +3V to +5V
- 50 Ohm Matched Input/Output
- 16 Lead 3x3mm SMT Package: 9 mm²

Functional Diagram

General Description

The HMC618LP3(E) is a GaAs PHEMT MMIC Low Noise Amplifier that is ideal for Cellular/3G and LTE/WiMAX/4G basestation front-end receivers operating between 1.7 - 2.2 GHz. The amplifier has been optimized to provide 0.75 dB noise figure, 19 dB gain and +36 dBm output IP3 from a single supply of +5V. Input and output return losses are excellent and the LNA requires minimal external matching and bias decoupling components. The HMC618LP3(E) shares the same package and pinout with the HMC617LP3(E) 0.55 - 1.2 GHz LNA. The HMC618LP3(E) can be biased with +3V to +5V and features an externally adjustable supply current which allows the designer to tailor the linearity performance of the LNA for each application. The HMC618LP3(E) is an ideal replacement for the HMC375LP3(E).

Electrical Specifications, $T_A = +25^\circ C$, $R_{bias} = 10K$

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 3 - 5, 7, 9, 12, 14, 16	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.	
2	RFIN	This pin is DC coupled and matched to 50 Ohms.	
6, 10	GND	This pin and ground paddle must be connected to RC/DC ground.	
8	RES	This pin is used to set the DC current of the amplifier by selection of the external bias resistor. See application circuit.	
11	RFOUT	This pin is matched to 50 Ohms.	
13, 15	Vdd2, Vdd1	Power Supply Voltage for the amplifier. External bypass capacitors of 100 pF, 1000pF, and 2.2 μF are required.

[2] Circuit Board Material: Rogers 4350.

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
