

ULN2065B - ULN2067B ULN2069B - ULN2071B ULN2075B - ULN2077B

80 V - 1.5 A QUAD DARLINGTON SWITCHES

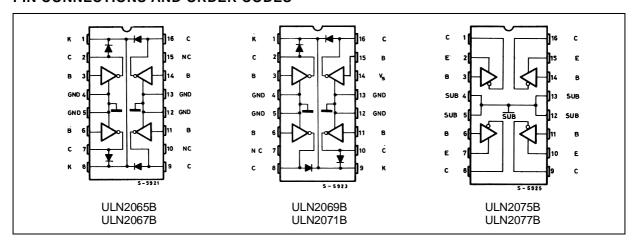

- OUTPUT CURRENT TO 1.5 A EACH DAR-LINGTON
- MINIMUM BREAKDOWN 80 V
- SUSTAINING VOLTAGE AT LEAST 50 V
- INTEGRAL SUPPRESSION DIODES (ULN2065B, ULN2067B, ULN2069B and ULN2071B)
- ISOLATED DARLINGTON PINOUT (ULN2075B and ULN2077B)
- VERSIONS CÓMPATIBLE WITH ALL POPU-LAR LOGIC FAMILIES

DESCRIPTION

Designed to interface logic to a wide variety of high current, high voltage loads, these devices each contain four NPN darlington switches delivering up to 1.5 A with a specified minimum breakdown of 80 V and a sustaining voltage of 50 V. The ULN2065B, ULN2067B, ULN2069B and ULN2071B contain integral suppression diodes for inductive loads and have common emitters; the ULN2075B and ULN2077B feature isolated darlington pinouts and are intended for applications such as emitter follower configurations. Inputs of the ULN2065B, ULN2069B and ULN2075B are compatible with popular 5 V logic families and the ULN2067B, ULN2071B and ULN2077B are compatible with 6-15 VCMOS and PMOS. The ULN2069B and ULN2071B include a predriver stage to provide extragain, reducing the load on control logic.

Notes: 1. Input voltage is with reference to the substrate (no connection to any other pins) for the ULN2075B and ULN2077B reference is ground for all other types.

2. Input current may be limited by maximum allowable input voltage.

MOUNTING INSTRUCTIONS

The R_{th j-amb} can be reduced by soldering the GND pins to a suitable copper area of the printed circuit board (Fig. 12) or to an external heatsink (Fig. 13).

The diagram of figure 14 shows the maximum dissipable power P_{tot} and the $R_{th\ j\text{-amb}}$ as a function of the side " \approx " of two equal square copper areas having a thickness of 35 μ (1.4 mils).

Figure 12 : Example of P.C. Board Area which is Used as Heatsink.

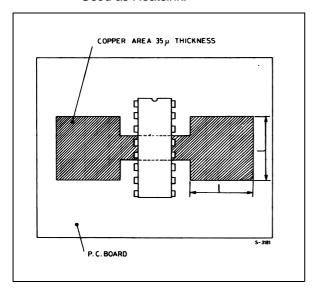

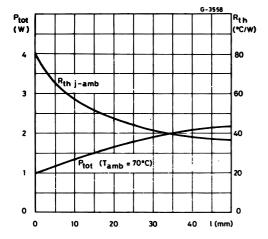

Figure 14: Maximum Dissipable Power and Junction to Ambient Thermal Resistance vs. Side "I".

During soldering the pins temperature must not exceed 260 °C and the soldering time must not be longer than 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.

Figure 13: External Heatsink Mounting Example.

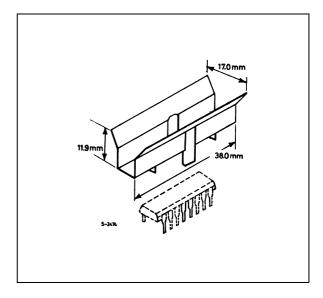

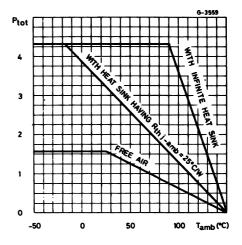

Figure 15: Maximum Allowable Power Dissipation vs. Ambient Temperature.
