

DATA SHEET

SKY65017-70LF: InGaP Cascadable Amplifier LF-6 GHz

Features

- Broadband: LF-6 GHz
- Small signal gain: 20 dB typ. @ 2 GHz
- High output 3rd order intercept: 37 dBm typ.
- OP_1 dB: 20 dBm typ. @ 2 GHz
- Input and output impedance: 50 Ω nominal
- Single, positive DC supply voltage
- SOT-89 package
- Available lead (Pb)-free, RoHS Compliant and Green MSL-1 @ 260 °C per JEDEC J-STD-020

Applications

- Wireless infrastructure: WLAN, HLAN, DBS, broadband, cellular base stations
- Test instrumentation
- CATV

Description

The SKY65017 is a general purpose, broadband amplifier fabricated from Skyworks InGaP HBT process and packaged in a SOT-89 package. The amplifier's input and output impedances are 50 Ω , which allows these amplifiers to be cascaded without external impedance matching networks. The typical -3 dB bandwidth of the SKY65017 is LF-6 GHz.

The SKY65017 is lead (Pb)-free and RoHS compliant. It is also "Green" — environmentally friendly, containing no antimony or halogens such as bromine.

A populated evaluation board is available upon request.

Full scattering parameters for this part are available for download at www.skyworksinc.com

Functional Block Diagram

NEW

Skyworks Green products are lead (Pb)-free, RoHS (Restriction of Hazardous Substances)-compliant, conform to the EIA/EICTA/JEITA Joint Industry Guide (JIG) Level A guidelines, and are free from antimony trioxide and brominated flame retardants.

Electrical Specifications at 25 °C

T = 25 °C, I_S = 100 mA, P_{IN} = 0 dBm, Z₀ = 50 Ω, measured in evaluation board, unless otherwise noted

Parameter	Symbol	Condition	Frequency	Min.	Typ.	Max.	Unit
Small signal gain	GP		2 GHz	19	20	22	dB
3 dB gain bandwidth	BW _{3 dB}				6		GHz
Noise figure	NF		2 GHz		4.5	5	dB
Output power at 1 dB compression	0 P _{1 dB}		2 GHz	19	20		dBm
Input and output VSWR	VSWR		0.1–4 GHz		1.9:1	2.0:1	
Output third order intercept point	OIP ₃	P _{IN} = -15 dBm each tone, Δf = 10 MHz	2 GHz		38		dBm
Operating voltage	V _D	Measured at pin 3		4.5	5	5.5	V
Reverse isolation	S ₁₂		0.1–8 GHz		20		dB
Gain flatness			10 MHz–6 GHz		±1.5		dB
Thermal resistance	θ _{JC}				70		°C/W

Typical Performance Data

Z₀ = 50 Ω, I_S = 100 mA, measured in evaluation board, unless otherwise noted

Small Signal Gain vs. Frequency

Isolation vs. Frequency

Input Return Loss vs. Frequency

Output Return Loss vs. Frequency

Absolute Maximum Ratings

Characteristic	Value
RF input power	15 dBm
Supply voltage	5 V
Supply current	120 mA
Power dissipation @ T = 25 °C	500 mW
Operating temperature	-40 °C to +85 °C
Storage temperature	-65 °C to +125 °C

Performance is guaranteed only under the conditions listed in the specifications table and is not guaranteed under the full range(s) described by the Absolute Maximum specifications. Exceeding any of the absolute maximum/minimum specifications may result in permanent damage to the device and will void the warranty.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions must be employed at all times.

SOT-89

All measurements are in millimeters

Pin Out (Top View)

Pin Descriptions

Pin Number	Pin Name	Description
2, 4	GND	Equipotential point – Internal circuit common, which must be connected to the PCB ground or common via the lowest possible impedance. Pin 4 must be connected via a low thermal resistance path to a good heatsink.
1	Input	RF input – RF input with 50 Ω nominal input impedance. An internally generated DC voltage is present at this pin, so an external DC block should be used to connect this pin to the external circuit.
3	Output	RF output – DC supply voltage input and RF output with 50 Ω nominal output impedance. The nominal voltage required at this pin is listed in the Electrical Specifications Table. Supply current is determined by an external resistor connected between the DC power supply and this pin.

Recommended Solder Reflow Profiles

Tape and Reel Information

Refer to the [“Discrete Devices and IC Switch/Attenuators Tape and Reel Package Orientation”](#) Application Note.

Evaluation Board

The SKY65017 evaluation board comprises the SKY65017 amplifier, the input and output of which are connected via 50 Ω microstrip transmission lines with DC blocking capacitors, C₁ and C₂, to the input and output SMA connectors, respectively.

The positive supply voltage, V_S, is connected to pin 3, RF Output of the amplifier via the decoupling network which consists of C₄, L₁, L₂ and R₁. The power supply current, I_S, must be limited, either via the current limit function of an external bench power supply, or by replacing L₃ with resistor R₁, the value of which is given in the Current Limiting Resistor Values table. The evaluation board is shipped with L₃ in place, which shifts an in-band series resonance of the supply decoupling network out of band. For low frequency applications, R₁ may be used to conveniently limit supply current on the evaluation board.

The evaluation board also contains a probe fixtures which facilitates the direct measurement of the s parameters of the SKY65017. The probe fixture comprises a very short coplanar waveguide (CPW) transmission line to pin 1 and an identical line to pin 3. All other pins of the amplifier are grounded. The CPW transmission lines are compatible with ground-signal-ground wafer probe tips, which can be connected to the RF ports of a vector network analyzer (VNA) via coaxial cables. The very small electrical length of these CPW transmission lines obviates the need to de-embed their effects from the s parameters that are measured. The supply constant current must be applied via the bias tee, which is typically integrated into the VNA, which is cascade with the output pin of the amplifier.

Evaluation Board Parts List

Component	Description	Value	Size	Suggested Part Number	Comments
C ₁ , C ₂ , C ₄	Capacitor	47 nF	0603		
L ₁	Inductor	33 nH	0603		
L ₂	Ferrite bead			FBMH4525HM162N-T	
R ₁	Resistor	See Current Limiting Resistor Values Table	0603		
U ₁	Amplifier			SKY65017	

Current Limiting Resistor Values

V _S , V	R ₁ , Ω	Minimum Power Dissipation rating, mW
5 ⁽¹⁾	0	—
6	10	250
7	20	500
8	30	500
9	40	1
10	50	1
12	70	2

¹. In order to ensure that the supply current does not exceed the recommended value, it is recommended to utilize a regulated current source to supply the device under this condition.
