<Cat.No.051025>

SPECIFICATIONS FOR NICHIA CHIP TYPE **BLUE** LED

MODEL : **NFSB036BT**

NICHIA CORPORATION

1.SPECIFICATIONS

(1) Absolute Maximum Ratings (Ts=25°C)

Item	Symbol	Absolute Maximum Rating	Unit
Forward Current	IF	180	mA
Pulse Forward Current	IFP	350	mA
Allowable Reverse Current	IR	85	mA
Power Dissipation	PD	684	mW
Operating Temperature	Topr	-30 ~ + 85	°C
Storage Temperature	Tstg	-40 ~ +100	°C
Dice Temperature	Tj	130	°C
Soldering Temperature	Tsld	Reflow Soldering : 260°C for 10sec. Hand Soldering : 350°C for 3sec.	

IFP Conditions : Pulse Width \leq 10msec. and Duty \leq 1/10

(2) Initial Electrical/Optical Characteristics (Ts=25°C)

Item	Symbol	Condition	Typ.	Max.	Unit	
Forward Voltage	VF	IF=150[mA]	(3.5)	3.8	V	
Luminous Flux	ϕ_v	IF=150[mA]	(4.0)	-	lm	
Luminous Intensity	Iv	IF=150[mA]	(1.4)	-	cd	
Chromaticity Coordinate*	x	-	IF=150[mA]	0.133	-	-
	y	-	IF=150[mA]	0.075	-	-

* Please refer to CIE 1931 chromaticity diagram.

(3) Ranking (Ts=25°C)

Item	Symbol	Condition	Min.	Max.	Unit	
Luminous Flux	Rank P1	ϕ_v	IF=150[mA]	5.4	6.4	lm
	Rank P0			4.5	5.4	
	Rank Pz			3.8	4.5	
	Rank Py			3.2	3.8	

* Luminous Flux Measurement allowance is \pm 7%.

Color Rank (IF=150mA, Ts=25°C)

	Rank W					
x	0.139	0.129	0.113	0.134	0.145	0.152
y	0.035	0.050	0.080	0.105	0.072	0.056

* Color Coordinates Measurement allowance is \pm 0.01.

* One delivery will include up to one color rank and four luminous flux ranks of the products.

The quantity-ratio of the ranks is decided by Nichia.

(4) Correspondence table of Luminous Flux – Luminous Intensity (Reference)

ϕ_v (lm)	I_v (cd)
6.4	(2.2)
5.4	(1.9)
4.5	(1.6)
3.8	(1.3)
3.2	(1.1)

2. INITIAL OPTICAL/ELECTRICAL CHARACTERISTICS

Please refer to figure's page.

3. OUTLINE DIMENSIONS AND MATERIALS

Please refer to figure's page.

Material as follows ;

Package	:	Ceramics
Encapsulating Resin	:	Silicone Resin (with Diffused)
Encapsulating Resin Color	:	Blue (with Diffused)
Electrodes	:	Ag Plating

4. PACKAGING

- The LEDs are packed in cardboard boxes after taping.

Please refer to figure's page.

The label on the minimum packing unit shows ; Part Number, Lot Number, Ranking, Quantity

- In order to protect the LEDs from mechanical shock, we pack them in cardboard boxes for transportation.
- The LEDs may be damaged if the boxes are dropped or receive a strong impact against them, so precautions must be taken to prevent any damage.
- The boxes are not water resistant and therefore must be kept away from water and moisture.
- When the LEDs are transported, we recommend that you use the same packing method as Nichia.

5. LOT NUMBER

The first six digits number shows **lot number**.

The lot number is composed of the following characters;

○□×××× - △■

- - Year (4 for 2004, 5 for 2005)
- - Month (1 for Jan., 9 for Sep., A for Oct., B for Nov.)
- ×××× - Nichia's Product Number
- △ - Ranking by Color Coordinates
- - Ranking by Luminous Flux

6.RELIABILITY

(1) TEST ITEMS AND RESULTS

Test Item	Standard Test Method	Test Conditions	Note	Number of Damaged
Resistance to Soldering Heat (Reflow Soldering)	JEITA ED-4701 300 301	Tsld=260°C, 10sec. (Pre treatment 30°C,70%,168hrs.)	2 times	0/50
Solderability (Reflow Soldering)	JEITA ED-4701 300 303	Tsld=215 ± 5°C, 3sec. (Lead Solder)	1 time over 95%	0/50
Thermal Shock	JEITA ED-4701 300 307	0°C ~ 100°C 15sec. 15sec.	20 cycles	0/50
Temperature Cycle	JEITA ED-4701 100 105	-40°C ~ 25°C ~ 100°C ~ 25°C 30min. 5min. 30min. 5min.	100 cycles	0/50
High Temperature Storage	JEITA ED-4701 200 201	Ta=100°C	500 hrs.	0/50
Temperature Humidity Storage	JEITA ED-4701 100 103	Ta=60°C, RH=90%	500 hrs.	0/50
Low Temperature Storage	JEITA ED-4701 200 202	Ta=-40°C	500 hrs.	0/50
Steady State Operating Life		Ta=25°C, IF=150mA Tested with Nichia standard circuit board.*	500 hrs.	0/50
Steady State Operating Life of High Temperature		Ta=70°C, IF=100mA Tested with Nichia standard circuit board.*	500 hrs.	0/50
Steady State Operating Life of High Humidity Heat		60°C, RH=90%, IF=100mA Tested with Nichia standard circuit board.*	500 hrs.	0/50
Steady State Operating Life of Low Temperature		Ta=-40°C, IF=150mA Tested with Nichia standard circuit board.*	500 hrs.	0/50
Vibration	JEITA ED-4701 400 403	100 ~ 2000 ~ 100Hz Sweep 4min. 200m/s ² 3direction, 4cycles	48min.	0/50
Substrate Bending	JEITA ED-4702	3mm, 5 ± 1 sec.	1 time	0/50
Adhesion Strength	JEITA ED-4702	5N, 10 ± 1 sec.	1 time	0/50
Electrostatic Discharges	JEITA ED-4701 300 304	R=1.5kΩ, C=100pF Test Voltage=2kV	3 times Negative/Positive	0/50

* Thermal resistance of LED with Nichia standard circuit board : $R_{ja} \cong 120^{\circ}\text{C}/\text{W}$
Nichia standard circuit board : FR4, t=1.6mm, Copper foil, t=0.07mm

(2) CRITERIA FOR JUDGING DAMAGE

Item	Symbol	Test Conditions	Criteria for Judgement	
			Min.	Max.
Forward Voltage	V _F	I _F =150mA	-	Initial Level × 1.1
Luminous Flux	φ _v	I _F =150mA	Initial Level × 0.7	-

* The test is performed after the board is cooled down to the room temperature.

7.CAUTIONS

(1) Moisture Proof Package

- When moisture is absorbed into the SMT package it may vaporize and expand during soldering. There is a possibility that this can cause exfoliation of the contacts and damage the optical characteristics of the LEDs. For this reason, the moisture proof package is used to keep moisture to a minimum in the package.
- The moisture proof package is made of an aluminum moisture proof bag with a zipper. A package of a moisture absorbent material (silica gel) is inserted into the aluminium moisture proof bag. The silica gel changes its color from blue to pink as it absorbs moisture.

(2) Storage

· Storage Conditions

Before opening the package :

The LEDs should be kept at 30°C or less and 90%RH or less. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

After opening the package :

The LEDs should be kept at 30°C or less and 70%RH or less. The LEDs should be soldered within 168 hours (7days) after opening the package. If unused LEDs remain, they should be stored in the moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel). It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

- If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following condition.

Baking treatment : more than 24 hours at $65 \pm 5^\circ\text{C}$

- Nichia LED electrodes are silver plated. The silver surface may be affected by environments which contain corrosive substances. Please avoid conditions which may cause the LED to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the User use the LEDs as soon as possible.
- Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

(3) Static Electricity

- Static electricity or surge voltage damages the LEDs.

It is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.

- All devices, equipment and machinery must be properly grounded. It is recommended that precautions be taken against surge voltage to the equipment that mounts the LEDs.
- When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity or not. It is easy to find static-damaged LEDs by a light-on test or a VF test at a lower current (below 1mA is recommended).
- Damaged LEDs will show some unusual characteristics such as the forward voltage becomes lower, or the LEDs do not light at the low current.

Criteria : ($V_F > 2.0\text{V}$ at $I_F=0.5\text{mA}$)

(4) Designing the position of LED on a board.

- No twist / warp / bent / or other stress shall be applied to the board after mounting LED with solder to avoid a crack of LED package.

Refer to the following recommended position and direction of LED.

Appropriate LED mounting is to place perpendicularly against the stress affected side.

- Depending on the position and direction of LED, the mechanical stress on the LED package can be changed. Refer to the following figure.

Stress : $A > B = C > D > E$

- Do not split board by hand. Split with exclusive special tool.
- If an aluminum circuit board is used, a large stress by thermal shock might cause a solder crack. For this reason, it is recommended an appropriate verification should be taken before use.

(5) Soldering Conditions

· The LEDs can be soldered in place using the reflow soldering method. Nichia cannot make a guarantee on the LEDs after they have been assembled using the dip soldering method.

· Recommended soldering conditions

	Reflow Soldering		Hand Soldering	
	Lead Solder	Lead-free Solder	Temperature	350°C Max.
Pre-heat	120 ~ 150°C	180 ~ 200°C	Soldering time	3 sec. Max. (one time only)
Pre-heat time	120 sec. Max.	120 sec. Max.		
Peak temperature	240°C Max.	260°C Max.		
Soldering time	10 sec. Max.	10 sec. Max.		
Condition	refer to Temperature - profile ①.	refer to Temperature - profile ②. (N ₂ reflow is recommended.)		

* After reflow soldering rapid cooling should be avoided.

[Temperature-profile (Surface of circuit board)]

<① : Lead Solder>

Use the conditions shown to the under figure.

<② : Lead-free Solder>

[Recommended soldering pad design]

(Unit : mm)

Use the following conditions shown in the figure.

- Occasionally there is a brightness decrease caused by the influence of heat or ambient atmosphere during air reflow. It is recommended that the User use the nitrogen reflow method.
- The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be influence to the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when using the chip mounter, the picking up nozzle that does not affect the silicone resin should be used.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than two times.
- When soldering, do not put stress on the LEDs during heating.

(6) Cleaning

- It is recommended that isopropyl alcohol be used as a solvent for cleaning the LEDs. When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations.
- Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Before cleaning, a pre-test should be done to confirm whether any damage to the LEDs will occur.

(7) Heat Generation

- Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.
- Please determine the operating current with consideration of the ambient temperature local to the LED and refer to the plot of Ambient temperature vs. Allowable Forward Current on CHARACTERISTICS in this specifications. Please also take measures to remove heat from the area near the LED to improve the operational characteristics of the LED.
- The equation ① indicates correlation between T_j and T_a , and the equation ② indicates correlation between T_j and T_s .

$$T_j = T_a + R_{ja} \cdot W \quad \text{.....} \quad \text{①} \qquad T_j = T_s + R_{js} \cdot W \quad \text{.....} \quad \text{②}$$

- * T_j = Dice Temperature : °C, T_a = Ambient Temperature : °C,
- T_s = Solder Temperature (Cathode Side) : °C,
- R_{ja} = Heat resistance from Dice to Ambient temperature : °C /W,
- R_{js} = Heat resistance from Dice to T_s measuring point \cong 65°C /W,
- W = Inputting Power ($I_F \times V_F$) : W

(8) Others

- The LED light output is strong enough to injure human eyes. Precautions must be taken to prevent looking directly at the LEDs with unaided eyes for more than a few seconds.
- Flashing lights have been known to cause discomfort in people; you can prevent this by taking precautions during use. Also, people should be cautious when using equipment that has had LEDs incorporated into it.
- The LEDs described in this brochure are intended to be used for ordinary electronic equipment (such as office equipment, communications equipment, measurement instruments and household appliances). Consult Nichia's sales staff in advance for information on the applications in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as for airplanes, aerospace, submersible repeaters, nuclear reactor control systems, automobiles, traffic control equipment, life support systems and safety devices).
- User shall not reverse engineer by disassembling or analysis of the LEDs without having prior written consent from Nichia. When defective LEDs are found, the User shall inform Nichia directly before disassembling or analysis.
- The formal specifications must be exchanged and signed by both parties before large volume purchase begins.
- The appearance and specifications of the product may be modified for improvement without notice.

* Color Coordinates Measurement allowance is ± 0.01 .
