

Features:

- ✓ Small size, minimal footprint – SMT/SIP package
- ✓ 16A Output Current (all voltages)
- ✓ High Efficiency: up to 94%
- ✓ High reliability
- ✓ RoHS Compliant
- ✓ Cost efficient open frame design
- ✓ Output voltage programmable by an external resistor.
- ✓ Monotonic Start with Pre-Bias.
- ✓ +ve Enable Logic and –ve Enable Logic models available

Thermal Considerations

The power module operates in a variety of thermal environments; however, sufficient cooling should be provided to help ensure reliable operation of the unit.

The thermal data presented is based on measurements taken at various airflows. Note that airflow is parallel to the long axis of the module as shown in Figure 1 and derating applies accordingly.

Figure 1. Thermal Tests Set-Up.

The temperature at either location should not exceed 110°C. The output power of the module should not exceed the rated power for the module ($V_{o,set} \times I_{o,max}$).

Convection Requirements for Cooling

To predict the approximate cooling needed for the module, refer to the Power Derating Curves in Figures 2-17 .

These derating curve are approximations of the ambient temperature and airflow required to keep the power module temperature below it's maximum rating. Once the module is assembled in the actual system, the module's temperature should be verified.

Typical Start Up

Ch1. Vin
Ch2. Vout, Full load.
Ch3. Q1-Vgs
Ch4. Q2-Vgs

Typical Start Up with pre-bias

Ch1 : Enable
Ch2 : Vout
Ch3 : Output current at Full Load.

Typical Output Noise and Ripple

$V_{in} = 12V_{dc}$, $V_o = 5.0V/16A$

Output with 1 μ F ceramic and 10 μ F tantalum capacitor

Typical Output Transient Response

$V_{in} = 12V_{dc}$, $V_o = 5.0V$, 50% - 100% - 50% Load change , @0.1A/ μ s

Output Voltage Set point adjustment.

The following relationship establish the calculation of external resistors:

$$R_{adj} = \left(\frac{15 \times 0.7}{V_o - 0.7525} \right) - 1 \text{ (K}\Omega\text{)}$$

For Vout setting an external resistor is connected between the TRIM and Ground Pin.

Resistor values for different output voltages are calculated as given in the table:

Vo, set (Volts)	RAdj (KΩ)
0.75	Open
1.2	22.46
1.5	13.05
1.8	9.024
2.0	7.417
2.5	5.009
3.3	3.122
5.0	1.472

Remote Sense:

All MURATA POWER SOLUTIONS SMT/SIP power modules offer an option for remote sense. The remote sense compensates for any distribution drops to accurately control voltage at the point of load. The voltage between the sense pin to Vout pin should not exceed 0.5V.

SMT Lead free Reflow profile

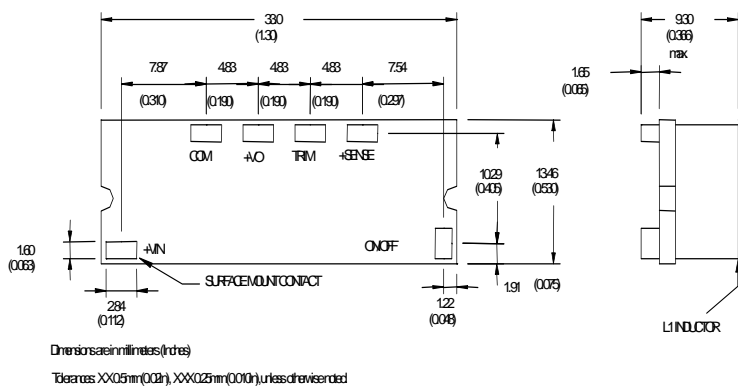

1. Ramp up rate during preheat : 1.33 °C/Sec (From 30°C to 150°C)
2. Soaking temperature : 0.29 °C/Sec (From 150°C to 180°C)
3. Ramp up rate during reflow : 0.8 °C/Sec (From 220°C to 250°C)
4. Peak temperature : 250°C, above 220°C 40 to 70 Seconds
5. Ramp up rate during cooling : -1.56 °C/Sec (From 220°C to 150°C)

Mechanical and pinning Information.

Given below is the outline drawing showing physical dimensions of the SIP & SMT package.

The external dimensions for SMT package are 33.00mm X 13.46mm X 9.3mm.

Dimensions in millimetres (inches)

Whereas, the external dimensions of the SIP version are 50.8mm X 12.70mm X 8.30mm.

Safety Considerations

The NEA series of converters are certified to IEC/EN/CSA/UL 60950. If this product is built into information technology equipment, the installation must comply with the above standard. An external input fuse (no more 20 A recommended) must be used to meet the above requirements. The output of the converter [Vo(+)/Vo(-)] is considered to remain within SELV limits when the input to the converter meets SELV or TNV-2 requirements. The converters and materials meet UL 94V-0 flammability ratings.
