Output Voltage Adjustment of the LDO06C Series

The ultra-wide output voltage trim range offers major advantages to users who select the LDO06C series. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.59-5.1 Vdc. When the LDO06C converter leaves the factory, the output has been adjusted to the default voltage of 0.59 V.

Notes:

- 1. Measured as per recommended system capacitance. See Technical Reference Note.
- 2. $di/dt = 10 A/\mu s$, Vin = Nom, Tc = 25 °C, load change = 0.50 lo to full lo and full lo to 0.50.
- 3. External input fusing is recommended.
- 4. Additional part numbers may be available with different output voltages.
- 5. Airflow dependent, 100 LFM minimum required.
- 6. No capacitors needed for ripple current stability.
- 7. No capacitors needed for stability.
- 8. TSE RoHS 5/6 (non Pb-free) compliant versions may be available on special request, please consult your local sales representative for details.
