

White LED Cup Light Controller

Features

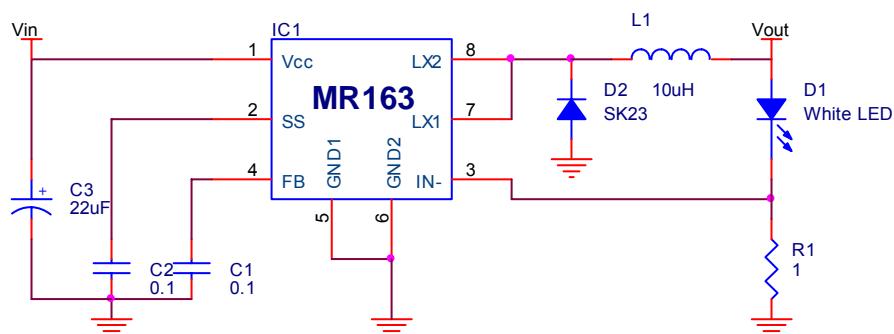

- Precision reference voltage: 0.5V ($\pm 2\%$)
- Wide operation input voltage: 3.0V ~ 18V
- High output loading current: typ. 2.0A
- Fixed PWM frequency: typ. 360KHz
- Programmable soft-start
- Thermal shutdown and short circuit protection
- Compensation and ON/OFF control
- Package: SOP8

General Description

The **MR163**, a 1-chip composed of high current MOS with a fixed PWM oscillator and an error amplifier with a 0.5V precision voltage reference for LED current feedback and driving capability, applied to offer space and low cost in many applications such as the DC/DC buck converter and serial white LEDs cup light controller and driver.

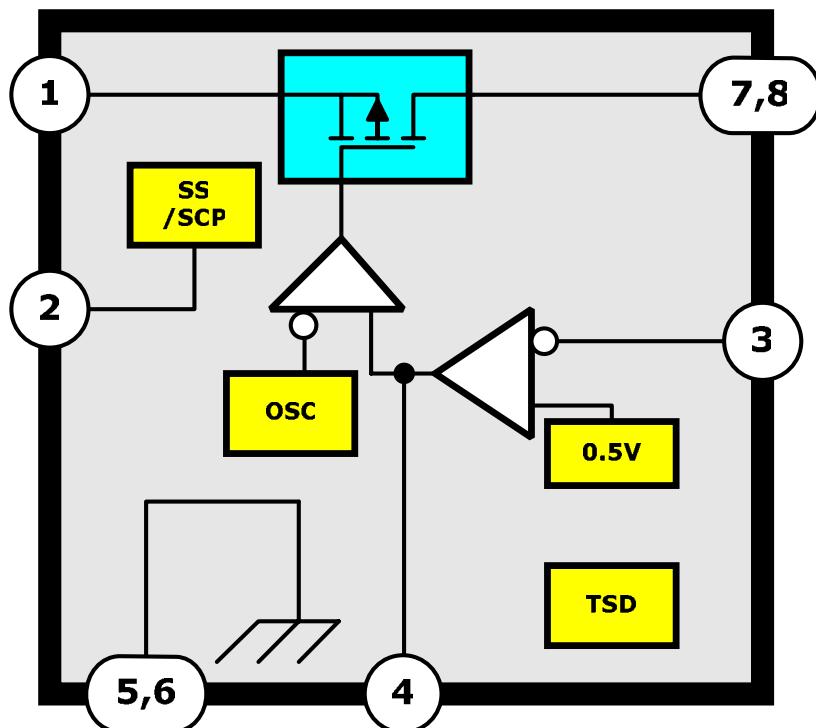

Typical Application Circuit

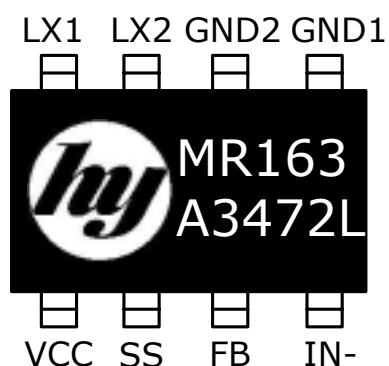

High-Brightness White LED Cup Application Example

Detailed Description

This is a simple application circuit for a 5W Whit light LED Application example. The MR163 built-in power-on soft-start function, the time of soft-start is adjusted by C2 capacitor, R1 is current senese for LED, when the sense current time the R1 would generate a sense feedback voltage to IC IN- terminal, IC should turn off LX1 and LX2 and keep L1 energy transfer to Vout and hold the LED lighting until and sense current isn't enough.

C3 and C4 are the capacitors and they keep the supply and Vout voltage smoothly.

It is a few external parts using and reduced PCB space very suitable for a tiny LED light system environment.
