

85-264 Vrms	12/24/36/48 V	300 W	400 W	Up to 91 %
Input Voltage	Semi-Regulated Output	Output Continuous	Output Transient	Full Load Efficiency
300 W Single		Since	Frame acked acked	OT ®

- Universal input voltage range
- Semi-regulated output for bus stability
- Parallel operation supported
- Integral fan cooling with speed control
- Active PFC; EN61000-3-2 compliant
- Low leakage; EN60601-1 compliant
- Low noise; EN55011 / EN55022 Class B compliant

- protection
- DC Power Good / AC Power Good signals
- Remote enable input
- Fan status output / Fan enable input
- Small size: 3" x 5" x 1.45" (open frame)
- RoHS 6/6 compliant
- 5 V (250 mW) standby output

# AC Input: 85-264 V<sub>RMS</sub> DC Output: 12/24/36/48V Semi-reg. Power: 300 W Series Grade: Medical

# ACuQor 300W Series ELECTRICAL CHARACTERISTICS

All specifications typical with  $T_A = 25$  °C, unless otherwise specified.

# **CONNECTOR DETAILS**

#### OUTPUT CONNECTOR PINOUT (top side)

**Technical Specification** 

Pin 1	FAN_GOOD	Open collector with internal 5V pullup. See Figure A. Pulsed low on fan failure, 100ms, 50% duty. Short to VOUT(-) to disable fan.
Pin 2	AC_POWER_GOOD	Open collector with internal 5V pullup. See Figure B. Pulled low on AC power dropout.
Pin 3	DC_POWER_GOOD	Open collector with internal 5V pullup. See Figure B. Pulled low during startup ramp and within 5 °C of temperature shutdown threshold.
Pin 4	5V_STANDBY	5 V $@$ 50 mA available whenever AC power is applied.
Pin 5	VOUT(+)	Positive Output Voltage.
Pin 6	VOUT(+)	Positive Output Voltage.
Pin 7	VOUT(+)	Positive Output Voltage.
Pin 8	VOUT(+)	Positive Output Voltage.
Pin 9	Reserved	Reserved for future use.
Pin 10	Reserved	Reserved for future use.
Pin 11	REMOTE_ENABLE	Logic input. See Figure C. Pull high to enable main output.
Pin 12	VOUT(-)	Negative Output Voltage.
Pin 13	VOUT(-)	Negative Output Voltage.
Pin 14	VOUT(-)	Negative Output Voltage.
Pin 15	VOUT(-)	Negative Output Voltage.
Pin 16	VOUT(-)	Negative Output Voltage.

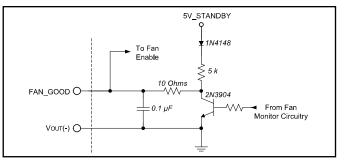

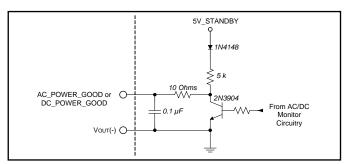

Figure A: Fan status output / Fan enable input interface circuitry.

# **PARALLEL OPERATION - MULTIPLE UNITS**

#### **Chassis configurations for Parallel Units**

ACuQor units are available either open-frame or pre-mounted at the factory. Up to 3 units can be mounted into a chassis, in either side-by-side or stacked configurations. For a complete list of options, see the "Part Numbering System" table on the last page, under "Package Type", along with the Mechanical Drawings pages. Only side-by-side configurations can be populated with 500W units. since each includes a thermal pad underneath.

#### **Interconnection of Parallel Units**

ACuQor units mounted in 2 and 3 unit chassis are not connected together. This allows the physical routing and connectivity of the external wiring to be customized to each application. The following table summarizes the recommended wiring to operate multiple units in parallel:

#### **Specifications of Parallel Units**

As a rule, units wired in parallel behave the same as single units. Any specification will remain unchanged that is expressed in units of voltage, time, frequency, or efficiency. Specifications expressed in terms of power, current, or capacitance, should be scaled by the number of units wired in parallel.

ACuOor units are individually calibrated at the factory, so that the output voltage vs. output current characteristic is always consistent (see Vout droop characteristic figures). As such, multiple units will share output current accurately. Full current is guaranteed from a bank of multiple units wired in parallel.

Output Connector Signal	Suggested Connection	Behavior with Multiple Units
REMOTE_ENABLE	Wire in parallel	Inputs activated simultaneously
FAN_GOOD	n	Wired-OR outputs – can be pulled low by any unit during an abnormal condition.
AC_POWER_GOOD	n	w
DC_POWER_GOOD	n	w
VOUT(+), VOUT(-)	w	Built-in droop characteristic ensures graceful current sharing.
12V_STANDBY*	n	w
5V_STANDBY	Do not wire in parallel	Fully regulated characteristic does not support current sharing. If placed in parallel, only the output with the highest set-point will drive current.

\*Note: Triple output models only.

# INSTALLATION INSTRUCTIONS

**General:** ACuQor AC/DC power supplies are intended for use as components in medical and industrial equipment. ACuQor units must be properly installed within end use equipment before they can be safely applied as described in this document. The suitability of the ACuQor/equipment combination must be verified through end product investigation.

**Mounting:** Refer to the Mechanical Drawings section. ACuQor units are provided with threaded stainless-steel stand-offs or inserts for mounting. This mounting hardware is internally connected to the input connector protective-earth terminal for functional-earth EMC control. Any orientation (vertical, horizontal, etc.) may be used. Adequate air space should be provided over the fan intake (top) and exhaust (sides) to allow for exchange of cooling air. ACuQor is designed for a pollution degree 2 environment. The suitability of the enclosed ACuQor mechanical assemblies must be verified through end product investigation.

**Encased models:** A minimum of 5 mm electrical clearance should be allowed from the connector ends of encased models.

**Input:** Refer to the Connector Details section for input connector wiring. ACuQor products require a single phase AC power source of 100-240V 50/60Hz nominal. Refer to nameplate label for input current ratings. A protective-earth connection is also required. Minimum wire size of 18 AWG (0.8mm<sup>2</sup>) is recommended. Both sides of the AC line are internally fused (see table for specific models). These fuses are not user replaceable.

MODEL	Input Fuses (in Both AC Lines)	Fuses Total
AQ0300	Littelfuse 6.3A 250V 21606.3XEP	2
AQ0400	Littelfuse 6.3A 250V 21606.3XEP	2
AQ0500	Littelfuse 10.0A 250V 216010XEP	2

**Output:** Refer to the Connector Details section for output connector wiring and signal I/O functionality. Refer to nameplate label for output current ratings. Main DC output (Vout+, Vout-) pins should use 20 AWG (0.5mm<sup>2</sup>) wire size. Individual main output pins should not be loaded to more than 5.5 A. For currents greater than 5.5 A, multiple main output pins/wires must be used in parallel. All signal I/O pins are referenced to Vout-.

**EMC:** ACuQor products have been tested to the EMC specifications listed in the Electrical Characteristics section. However, end use equipment must be tested to verify EMC compliance.

**Hipot Testing:** ACuQor products are rated for Hipot testing levels of 1500 Vac input to protective-earth, 1500 Vac output to protective-earth, and 4000 Vac input to output. When performing the 4000 Vac input to output test, the test voltage must be balanced evenly 2000 Vac input and output to protective-earth. Two oppositely phased test voltage sources or a single test voltage source with external balancing impedances (capacitors) may be used to prevent overstressing input or output to protective-earth insulation per IEC60601-1 2005 sub clause 8.8.1 and IEC60601-1 1990 sub clause 20.4g.

**Patient Contact:** ACuQor models include versions designed for BF and CF patient contact application per IEC60601-1. These ACuQor models provide reinforced insulation at the DC output voltage level and basic insulation at the 240 Vac level from output to protective-earth. Note that equipment and wiring may add to system leakage currents so that the end product must be tested for compliance. Refer to the Electrical Characteristics section for typical ACuQor input and output leakage currents. In addition, ACuQor defibrillation rated models comply with the minimum output to protective-earth creepage/clearance requirement and defibrillator pulse test of IEC60601-1.

### PART NUMBERING SYSTEM

The part numbering system for SynQor's ACuQor AC/DC power supplies follows the format shown in the table below. Not all combinations make valid part numbers, please contact SynQor for availability.

Family	Output Power	Grade	Range	Output Voltage (xx=Standard; xT=Triple)	Package Type (Correlates to Output Power)	Thermal Design	Options
AQ ACuQor series of ac-dc semi-regulated output power supplies	0300: 300 W 0400: 400 W 0500: 500 W 0600: 600 W (2 x 300 W) 0800: 800 W (2 x 400 W) 0900: 900 W (3 x 300 W) 1000: 1000 W (2 x 500 W) 1200: 1200 W (3 x 400 W) 1500: 1500 W (3 x 500 W)	M: medical	<b>U</b> : universal (85-264 V <sub>RMS</sub> )	12: 12 V 1T: 12 V / 5 & 12 V STBY 24: 24 V 27: 24 V / 5 & 12 V STBY 36: 36 V 37: 36 V / 5 & 12 V STBY 48: 48 V 4T: 48 V / 5 & 12 V STBY	E: 1 unit (3" x 5") R: 2 units; flat S: 2 units; stacked T: 3 units; flat U: 3 units; stacked	A: open frame C: encased Q: encased only	Medical Grade: BF: BF isolation rating CF: CF isolation rating CFD: CF isolation rating defibrillator proof

# Example: AQ0300MU12EACFD

# ACCESSORIES

SynQor offers a series of assemblies that can be ordered according to the table below. Mechanical drawings for these accessories are available for download in pdf format from the SynQor website.

Part Number	Description
AQ-CBL-INPUT1C	Input mating cable with pre-stripped wire ends (36" long).
AQ-CBL-OUT1C	Output mating cable with pre-stripped wire ends (18" long).
AQ-CBL-OUT1CD	Same as AQ-CBL-OUT1C with an additional 8-pin connector.
AQ-CBL-OUT2C	Output mating cable with connectors on both ends (18" long).
AQ-CBL-OUT2CD	Same as AQ-CBL-OUT2C with an additional 8-pin connector.
AQ-INSUL1M	Single module bottom-side Mylar insulator for open frame mounting.
AQ-EVAL-PRL3	Evaluation board for up to three paralleled modules.

# **APPLICATION NOTES**

A variety of application notes and technical white papers can be downloaded in pdf format from the SynQor website.

### PATENTS

SynQor holds the following patents, one or more of which might apply to this product:
